RE: Architectural Barrier Removal Program  
CSU Project No. 9522

Attention: Mr. Jon Regnier  
Assistant Vice Chancellor  
Physical Planning and Development

Dear Mr. Regnier:

Building Analytics is pleased to submit the attached Transition Plan for the California Polytechnic State University, San Luis Obispo campus. The Transition Plan has been prepared in accordance with Title II of the American's with Disabilities Act (ADA). Separate Transition Plans have been prepared for each of the twenty campuses. In addition to this hard copy, a copy of the software and data files for the CSU system will be provided under separate cover.

It has been a pleasure working with the CSU, the staff at the Division of Physical Planning and Development, the campus Physical Plant and Planning Departments and the offices of the Disabled Student Services. This project has truly been a cooperative team effort and we appreciate the assistance provided by the CSU at both the Chancellor's Office and the campuses.

Our final task is to train the appropriate CSU and campus staff to utilize the ADA database management system. A training session is currently being scheduled.

If you have any questions regarding this Transition Plan, please contact me directly.

Sincerely,  
BUILDING ANALYTICS

Richard Buchanan, A.I.A.  
Vice President

RB/tmr

- G. Compliance Tables .....
- H. Listing of Campus Buildings and the Number of Accessible Entrances

## EXECUTIVE SUMMARY

Building Analytics was engaged by the Trustees of the California State University to prepare a Transition Plan for the twenty CSU campuses and eleven off-site locations, in accordance with the Americans with Disabilities Act (ADA).

This nine month project included the following primary tasks:

1. Development of a computer based architectural barrier survey checklist to collect the field data.
2. Field survey of all CSU facilities (1520 buildings totaling 43,435,577 square feet at all the sites)
3. Development of a database management system to analyze and report the field data.
4. Development of compliance tables based on the ADA (ADAAG), the Uniform Federal Accessibility Standards (UFAS), and the California State Building Code (Title 24, part 2) to test compliance.
5. Creation of "Corrective Action Codes" to translate the issues of non-compliance into required corrective action with assigned budget costs for barrier removal.
6. Involvement of the disabled community at each campus in the project through public forums and questionnaires.
7. Establishment of priorities for barrier removal through periodic progress meetings with the CSU Access Committee and Physical Planning and Development representatives.

The Title II Regulations of the ADA, Non Discrimination On The Basis Of Disability In State And Local Government Services, was the primary focus of this study. Title II requires that a public entity shall operate each service, program or activity, so that when viewed in its entirety is readily accessible to and usable by the disabled. A public entity may comply with this requirement by a variety or combination of means such as reassignment of services to accessible rooms or buildings, use of accessible moveable equipment or facilities, and/or through the removal of existing architectural barriers. It should be emphasized that a public entity is not required to make architectural changes where alternative methods of compliance are effective or if architectural changes would pose an undue financial burden on the institution.

Title II does require public entities to prepare a Transition Plan in the event that architectural changes are required to achieve program accessibility. The Transition Plan should be completed by July 26, 1992. All identified architectural barriers which deny access, are to be removed by January 26, 1995.

The accessibility survey included all campus facilities. Facilities were classified as "essential" or "non-essential" based on their function (refer to the Appendix, item B). Essential facilities contain university program space. Due to the high utilization of campus facilities relocation of program space to other accessible facilities was not considered to be a realistic option. All essential campus facilities should therefore be made accessible. "Non-essential" facilities were limited to those facilities which contain no program space. However, even these buildings may someday be required to be accessible as part of a job accommodation under Title I, employment provisions. However, the priority assigned rating to modify these facilities would be low.

The prioritized ranking of architectural barrier removal was based on the broad guidelines established under Title III of the ADA Regulations. No guidelines for establishing priorities are provided under Title II. The priority ranking was modified and expanded as recommended by the CSU Access Committee. Greater emphasis was placed on the issues of life safety and telecommunication barriers than found in the regulations. These concerns were voiced at the ADA forums and through questionnaires dispersed to disabled students and staff.

Section 8 contains the comprehensive listing of all architectural barriers on campus. The total budget for each priority category is as follows:

|   |                         |
|---|-------------------------|
| Priority 1: General Access to Site and Buildings .....  | \$ 2,166,055.00         |
| Priority 2: Basic Access to Program Areas .....         | \$ 2,798,270.00         |
| Priority 3: Important Additional Support Services ..... | \$ 765,240.00           |
| Priority 4: Comprehensive Accessibility .....           | \$ 8,776,380.00         |
| <b>Total .....</b>                                      | <b>\$ 14,505,945.00</b> |

The Transition Plan should be viewed as a "living" document to be updated by the campus or Physical Plant Department as projects are undertaken to remove architectural barriers. The Transition Plan should be updated periodically, and the remaining barriers should be reprioritized. The campuses should hold forums to allow review and input

from the disabled community. The campus president should be designated as the person responsible for implementation of the plan.

## **SECTION 2**

### ***INTRODUCTION***

## **SECTION 2**

### ***INTRODUCTION***

#### **A. BACKGROUND**

The Americans with Disabilities Act (PL 101-336), the ADA, was enacted on July 26, 1990. The ADA is the culmination of the growth of the civil rights movement for the disabled in this country over the past twenty five years. The Act extends the prohibition of discrimination in federally assisted programs established by Section 504 of the Rehabilitation Act of 1973, the requirements for making programs accessible, and for providing accessible means of communication.

The ADA is divided into four major Titles:

- Title I: Employment
- Title II: Public Services and Transportation
- Title III: Public Accommodations
- Title IV: Telecommunications

As a state entity, the California State University System (CSU) is primarily impacted by Title II of the regulations (non-discriminatory on the basis of disability in state and local government services). As an employer the CSU is also impacted by the Title I regulations. The focus of this project is to identify architectural barriers which deny access to the programs of the University. All campus facilities and sites were surveyed.

The ADA is not a building code, it is a civil rights law. It will not be enforced as a building code by plan check review or by local building inspectors. It will be enforced as other civil rights law through litigation of complaints filed with the Department of Justice. The Department of Justice can also file a civil suit.

The state building code, Title 24, Part 2, is currently being revised to be "aligned" or brought into compliance with ADA (ADAAG Accessibility Guidelines). It is anticipated that the draft document will be "certified" by the Department of Justice later this year. Assuming certification is given then, within the state of California, Title 24 would govern

as the code for access compliance. Currently, however both ADA and Title 24 have jurisdiction.

Title II emphasizes that "a public entity shall operate each program or activity so that the service, program, or activity, when viewed in its entirety is readily accessible to and usable by individuals with disabilities." The regulations do not require that all facilities of a public entity be accessible. Other acceptable options to barrier removal include reassignment of services to accessible buildings. However, when it is decided to make structural changes to provide access then the regulations state that the accessibility requirements of either the Uniform Federal Accessibility Standard (UFAS) or ADA, Title III, (ADAAG) should apply (or Title 24, Part 2, when certified).

The ADA became effective January 26, 1992. Under Title II, a public entity is given three years from the effective date to remove architectural barriers which deny access. A public entity is also required to prepare a transition plan (within six months of the effective date) establishing the corrective work necessary to remove architectural barriers.

The campus has undertaken previous corrective work to provide "program accessibility" as required by Section 504 of the Rehabilitation Act. The extent to which corrective action has been undertaken varies considerably across the CSU system. In addition, many of these plans were developed years ago and have not been updated as changes have been made on campus. This project was undertaken by the CSU to survey all of the CSU's facilities and uniformly assess the issue of access compliance utilizing the new ADA requirements.

## **B. PURPOSE**

The purpose of this project is to assist the California State University System prepare a Transition Plan (for each of the twenty campuses and eleven off-campus locations) in accordance with the requirements of the Americans with Disabilities Act (ADA).

## **C. SCOPE OF WORK**

Building Analytics was engaged by the Trustees of the California State University to prepare ADA Transition Plans for all twenty campuses and the off-site facilities. The CSU system is comprised of 1,520 buildings, totaling 43,435,577 square feet. The contract period was from July 6, 1992 to May 11, 1993. The contract was extended to allow additional programming to integrate the ADA database management system with "SAM", the CSU program for monitoring minor capital outlay expenses and to run both programs on the CSU mainframe computer system.

The project consisted of the following tasks:

- Task I - Develop a Detailed Work Plan
- Task II - Code Research and Development of Checklist
- Task III - Database Management Development
- Task IV - Testing and Training
- Task V - Campus Surveys/Data Input
- Task VI - Preliminary Draft
- Task VII - CSU Review
- Task IX - Transition Plan/Final Report
- Task X - Additional Programming Services

A brief description of each task and time frame is as follows:

- |               |   |                         |
|---------------|---|-------------------------|
| <b>WEEK 1</b> | <b><u>TASK I - DETAILED WORK PLAN</u></b>   | <b>July 6 - July 10</b> |
|               | <ul style="list-style-type: none"><li>• Developed a detailed listing of each major task, the deliverables, personnel involved, description of the scope of work, and a detailed project schedule. Submit the work plan to the Trustees for review and approval.</li></ul> |                         |

- The master checklist allowed the efficient identification of barriers. The checklist was developed with the participation of experts who have extensive experience with the development and rational implementation of accessibility codes. Barriers were assessed based on the ADAAG criteria, in accordance with Title II of the ADA. Rather than simply recording whether a building or site is in compliance or not, we collected descriptive data about the design that is available for future reference. The collection of descriptive information will provide a database that can be used over the long term to monitor and adjust the transition plans as codes and interpretations of compliance evolve, and as priorities change.
- Developed a survey checklist based on the UFAS, ADA and Title 24 criteria in both a written format and a computer based format. This survey tool was designed to include all issues related to existing disabled access code requirements, as well as, anticipated future areas of code concern to minimize the need to resurvey the campuses at some time in the future.
- The survey checklist was based on previously developed similar survey tools, with emphasis on collecting and recording the data in an efficient manner. Repeat, or Go To commands were utilized as much as possible to bypass questions which are irrelevant to the specific field conditions.
- Much of the field data collected consisted of actual field measurements, rather than yes/no or other compliance criteria to minimize the need for future resurveying of the campuses.
- The survey checklist inventoried all spaces within the buildings utilizing the room identification number provided in the space program developed for the CSU system. This space program was given to the project team prior to each campus visit in a timely manner, to permit input of the space program into the survey checklist. All site access issues were also inventoried.

WEEKS  
2- 29

TASK III - DEVELOP THE DATABASE MANAGEMENT SYSTEM

July 13 - January 22

- The scope of work required computerization to manage the large amount of data collected, to prepare reports efficiently and to allow rapid revisions. We used a computer database approach to automate report generation and compute barrier removal costs. We computed cost estimates at different units of analysis (e.g. building, campus, high priority, low priority, etc.). The database also facilitates the application of priorities for developing campus transition plans.
- The database management system utilized the commercial "off-the-shelf" software, Foxbase+. The software is both Macintosh and IBM compatible. The software was tested after it is developed to insure that it was compatible. The product is a multi-file (relational) database to properly store the data efficiently. The program has a multi-user capability with security to protect original files. Database views were created to consolidate information among the data files and to allow for easy querying of information. The database included all the field data collected and an initial prioritization. The capability of updating the database by the client (CSU) as barriers are removed was designed into the program. Custom programs were supplied for the client to enter, organize and revise the data. A training manual and one week training session was provided to assist the CSU in understanding and using the product.
- The database management system is linked in a department manner to reduce the size of the database without penalizing the response/search time. Data views were created to consolidate the information among the data files to allow for easy querying of information.
- The data sets a reusable for a variety of purposes. The program has multi-user capability with security to protect the original files.
- The database contains a number of reports to assist the client in understanding how to use the product and to derive the basic information from the database. Internal checks in the program insure accurate data entry.

- The database includes all the field data collected and an initial prioritization and cost estimate for barrier removal. The cost to remove complicated architectural barriers was estimated manually, and this information is entered into the database.
- The database system includes compliance tables created to allow checking of the descriptive data against the code requirements. These tables are able to be edited and expanded by the client as standards are modified in the future.
- Custom programs are supplied to enter, organize and revise the data. Programs for generating standard reports are supplied within the scope of work of the contract.
- The entire 20 campus database is to be installed on the CSU mainframe, with access at the campus level to their campus data files only. The original data files are secured.

WEEK 6      TASK IV - FIELD TESTING AND TRAINING      July 10 - July 14

- Field tested the survey checklist on a test campus (CSU-Northridge) utilizing all regular and reservist ( $\pm 28$ ) survey team members as a one week training exercise.
- Half of the survey team members collected and stored the data manually on a written survey format. The other half of the survey team members recorded the field data utilizing a portable computer<sup>1</sup>. All survey team members worked alone. The data collected by hand was inputted into a lap top computer located in our campus field office. The data collected in the portable computers was downloaded into the lap top computers on a daily basis. The relative cost and efficiency of collecting field data utilizing these two methods was analyzed after the one week training session. The use of "palm-tops" proved to be the most efficient method to survey all of the campuses and off-site facilities.
- Refined the survey checklist and database system based on the initial field results.

---

<sup>1</sup> Poget "palm-top" computers were utilized in the field. This 1 1/4 pound DOS3.31 PC. has 512 RAM and 640K ROM, and a 80C88 processor. Options include 512K - 4 MB RAM cards. The AA battery life is  $\pm 40$  hours. The link cable allows uploading to IBM compatible machines (486 laptops were used for daily uploads).

- Continued to develop the report writing, cost estimating, and prioritization capabilities of the database management system.

WEEKS      TASK V - CAMPUS SURVEYS/DATA INPUT September 8-February 2  
10-31

- The two survey teams (each team consisted of a team leader and 10 surveyors) surveyed all the campuses, recording all the data. The team size varied depending on the size of the campus. The survey teams spent a maximum of five days on site at each campus. Fewer days were required for the smaller campuses. The campus visits shall occurred over a twenty week period, on an alternating week basis. This schedule allowed flexibility in the time to conduct the surveys, and to enter and check the data.
- The field data was transferred to the primary 486 IBM computers in the field office (via cable link) and via modem or by diskettes to our programmer. A report file was built into the lap top computers utilized in the field to compare the CSU space program listing to the spaces surveyed on a daily basis. A print-out was made of all spaces not surveyed and the reasons why. If a room was simply missed it was resurveyed the following day. The listing of spaces not surveyed during the one week period of the site visit was given both to the campus contact person and to the CSU representative. This situation occurred very infrequently<sup>2</sup>.
- The survey team leaders had the role of survey team management and quality control. Quality control consisted of random sampling of the survey teams recorded data. Any discrepancies were remeasured by the survey team.<sup>3</sup>
- The survey team leaders coordinated their work with the identified campus contacts. The team leaders meet with campus representatives to review previously conducted accessibility surveys of the campus facilities and to identify

---

<sup>2</sup> Although lack of entry rooms during the survey week was an anticipated problem, this proved not to be a problem in the field. Since each surveyor averaged 30,000 square feet per day, they remained in most buildings for several days and could virtually always find a time when a room was not occupied.

<sup>3</sup> While in the field, print out reports were run from the data sets of the facilities surveyed to verify the room count from the survey data against the building plans. Any rooms which were missed were resurveyed.

areas of key concern regarding campus access. A listing of essential campus facilities was jointly developed.

- A letter from the project team was sent to the campuses prior to the campus visit. The letter identified the survey team leader, the size of the survey team and the dates of the site visit. The specific needs of the survey team were identified including the need for an on-site field office to accommodate the team with a telephone, table and chairs to accommodate the team members and the need to have access to all campus facilities and spaces. The preferred solution was for the survey team members to be given master keys to all campus buildings. If this was not possible, then campus staff were escorted the survey team members. It was anticipated that five staff from the campus would be required to escort the survey team members during the entire survey week.
- The survey team surveyed and inventoried all architectural accessibility issues on all campus buildings including temporary and permanent facilities and state and non-state owned facilities. The survey team leaders will be responsible for surveying the site design issues, i.e., the parking lots and parking structures, and campus walkway systems.
- The survey team leader represented the project team at all campus meetings. The survey team members were responsible for the survey work only, and were not involved in campus meetings.
- The CSU's representative, Sara Systems, conducted a separate quality control check. It was requested that the results of this check be provided to the survey team leader while the survey team was on the campus. In that way areas where discrepancies had occurred could be resurveyed and would not necessitate a return trip to the campus.
- A week was provided between campus visits for the survey team leaders to review the data collected. This time also provided flexibility in the project schedule to spend more survey time on a campus, if required.
- The survey team leaders reviewed plans for buildings currently under design or construction on each campus during the site visit. General concerns regarding

access were verified. In addition, the impact of the proposed building on general campus access, and the access to adjoining buildings were studied.

WEEKS  
17-29

TASK VI - DRAFT PRIORITIZATION RANKING

Oct. 26- Jan. 22

- With input from the Trustees, the project team established the priority ranking variables and the draft ranking of architectural barriers on a campus-wide basis. Barriers were ranked into priority categories such as: highest, high, medium, low and very low. Cost estimates were provided for each item of non-compliance, with subtotals for each building, and each campus. The ranking system was revised as requested after review by the Trustees.
- A preliminary set of priorities for removal of barriers based on the ADA regulations was developed by the project team working with our expert consultants. A prioritized list of barrier removal projects in each building with associated costs was then generated using an automated procedure developed by the database management system. The preliminary list of priorities was reviewed by the Trustees.
- This Task ran concurrently with Task V, the campus surveys. It was a rolling process allowing the campuses which were surveyed first to be prioritized first.
- The prioritized listing of barriers was based on the ranking variables established by the ADA regulations (i.e., accessible path of travel to a building, into a building, to spaces within a building and to support spaces within the building). Other potential variables effecting the ranking included the age of the facility, its historic significance, whether it is a permanent or temporary facility, the essential nature or use of the facility, life/safety concerns, and whether it is a state owned or non-state owned facility.
- Public forum meetings were organized on each campus by the Office of Disabled Student Services. These meetings allowed input from the disabled community including disabled students, staff, faculty and local organizations. The information obtained from these meetings was valuable in establishing the priorities for barrier removal. For those individuals unable to attend the public

forum, questionnaires were distributed entitled "Questionnaire Concerning Architectural Barriers On Campus." These forums elicited written responses to many of the same access issues discussed at the forum. A high level of interest and response was achieved by providing these two means for the disabled community to contribute to this project.

**WEEKS**            **TASK VII - DRAFT TRANSITION PLAN**            **January 25 - February 12**  
30-32

- A draft copy of the Transition Plan was prepared and presented to the Trustees for review (Task VIII). A Transition Plan was prepared for each campus, with an executive report summarizing all twenty campuses. The campus reports will include a narrative of major findings, including site, building, telecommunication, areas of special concern, and the revised prioritized listing of architectural barriers and cost estimates for barrier removal.
- The prioritized ranking is capable of being sorted on a campus wide basis, building basis, state owned vs. non-state owned basis or system wide basis, and in other ways requested by the users.
- The prioritized listing is capable of being updated by the users as changes are implemented to serve as a "living" transition plan.
- An initial report was prepared by Consultant documenting the current status of architectural barriers on each campus. In addition, a system wide executive summary report was provided.

**WEEKS**            **TASK VIII - CSU REVIEW**            **February 15 - February 26**  
33-34

- The draft Transition Plan was reviewed by the Trustees and the Access Committee.

**WEEKS**            **TASK IX - FINAL REPORT/TRANSITION PLAN**            **March 1-March 30**  
35-39

- The consultants incorporated changes into the Draft Transition Plan as requested by the Trustees and the Access Committee.

## TASK X - ADDITIONAL SERVICES

- Building Analytics is currently under contract to integrate the ADA automated condition assessment information system with the CSU's minor capital outlay monitoring program.

Public forum meetings were organized on each campus by the Office of Disabled Student Services. These meetings allowed input from the disabled community including disabled students, staff, faculty and local organizations. The information obtained from these meetings was valuable in establishing the priorities for barrier removal. Refer to Section 5 for a review of the key access issues presented. For those individuals unable to attend the public forum, questionnaires were distributed entitled "Questionnaire Concerning Architectural Barriers On Campus." These forms elicited written responses to many of the same access issues discussed at the forum. A high level of interest and response was achieved by providing these two means for the disabled community to contribute to this project.

Another questionnaire entitled, "CSU Architectural Barrier Removal Program Listing of Essential Program Spaces" was distributed to the department heads at each campus. Essential program spaces are defined as those buildings or ramps to which students, faculty and staff must have access to a part of the university program, and whose functions cannot be transferred to another building or room. The results of this questionnaire was far less fruitful since only 20% of the campuses responded. Many of the campuses expressed the opinion that all of their facility space was "essential" and should all be accessible. While we share that philosophy, we were hopeful that the completed survey forms would be useful in assisting the Access Committee in the task of prioritizing the removal of barriers. The lack of response means that all spaces must be given "equal" importance in terms of access compliance. This approach has been adopted in the prioritization of barriers contained in Section 3, and in the Inventory of Architectural Barriers, Section 8. The campus will have to determine which spaces should be made accessible, in which order, within the category Priority 2. Input should be solicited from the office of Disabled Student Services and disabled students and staff.

Lastly a "Plan Review" process was undertaken to insure that all projects currently under design or construction meet the requirement of the ADA (these projects typically

were designed to meet Title 24, part 2 only, not ADA, which took effect in January of 1992). Refer to Section 4 for specific Plan Review comments.

Many issues were raised by disabled students and staff which are not addressed by the current ADA regulations. Some examples include: design criteria for people who have chemical and environmental sensitivities, children's environments and recreational facilities (such as the childcare centers), and non-fixed or non-built-in equipment. The scope of this project focused on compliance with the ADA regulations. Although we recognize that these issues raise significant access concerns, standards do not exist which adequately address them. Additional research into these areas are required before standards are developed. We recommend that disabled student, faculty and staff who have specialized needs which are not addressed by the current ADA regulations, express their requirements to the office of Disabled Students Services, or to the office of the President of the campus.

**SECTION 3**

***PRIORITIES FOR BARRIER REMOVAL***

## **SECTION 3**

### ***PRIORITIES FOR BARRIER REMOVAL***

Title II of the Americans with Disabilities Act (ADA), which addresses non-discrimination on the basis of disability in state and local government entities, does not specifically state priorities for barrier removal. The emphasis of Title II is on "program" accessibility, unlike Title III which mandates changes to the physical environment when readily achievable. Title II states:

"A public entity shall operate each service, program or activity so that the service, program, or activity, when viewed in its entirety is readily accessible to and usable by individuals with disabilities. This paragraph does not -

(1) Necessarily require a public entity to make each of its existing facilities accessible to and usable by individuals with disabilities;

(2) Require a public entity to take any action that would threaten or destroy the historic significance of an historic property, or;

(3) Require a public entity to take any action that it can demonstrate would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administration burdens. A public entity may comply with the requirements of this section through such means as redesign of equipment, reassignment of services to accessible buildings, assignment of aides to beneficiaries, home visits, delivery of services at alternate accessible sites, alteration of existing facilities, use of accessible rolling stock or other conveyances, or any other methods that result in making its services, programs, or activities readily accessible to and usable by individuals with disabilities. A public entity is not required to make structural changes in existing facilities where other methods are effective in achieving compliance. A public entity, in making alterations to existing buildings, shall meet the accessibility requirements of either the Uniform Federal Accessibility Standards (UFAS) or the Americans with Disabilities Act Accessibility Guidelines for Buildings and Facilities (ADAAG) (except for the elevator exception)."

In addition, no alteration of an existing element, space, or area of a building or facility shall impose a requirement for greater accessibility than that which would be required for new construction under the ADA (Title II). For example, if the elevators and stair in a building are being altered and the elevators are, in turn, being made accessible, then no accessibility modifications are required to the stairs connecting levels connected by the elevator. This will greatly reduce the cost to correct many items of non-compliance listed as a Priority 4.

In the event that structural changes are undertaken to achieve program accessibility the public entity is required to develop a transition plan outlining the steps necessary for compliance. The plan should identify physical obstacles, describe method of barrier removal or other alternative action, specify the time frame for compliance, and indicate the university official responsible for implementing the plan. Determining which barriers to remove in which prioritized order by which time is not specified.

By contrast, the Title III Regulations, Non-Discrimination On The Basis Of Disability By Public Accommodations And In Commercial Facilities have established explicit priorities for barrier removal. They are in order of priority as follows:

(1) First, a public accommodation should take measures to provide access to a place of public accommodation from public sidewalks, parking, or public transportation. These measures include, for example, installing an entrance ramp, widening entrances, and providing accessible parking spaces.

(2) Second, a public accommodation should take measures to provide access to those areas of a place of public accommodation where goods and services are made available to the public. These measures include, for example, adjusting the layout of display racks, rearranging tables, providing Brailled and raised character signage, widening doors, providing visual alarms, and installing ramps.

(3) Third, a public accommodation should take measures to provide access to restroom facilities. These measures include, for example, removal of obstructing furniture or vending machines, widening of doors, installation of ramps, providing accessible signage, widening of toilet stalls, and installation of grab bars.

(4) Fourth, a public accommodation should take any other measures necessary to provide access to the goods, services, facilities, privileges, advantages, or accommodations of a place of public accommodation.

The logic that the Department of Justice developed for the prioritization of barrier removal in public accommodations can be applied to state and local government entities as well. The CSU Access Committee began the process of prioritization of architectural barriers on the campuses with this initial premise. The categories were then expanded to include the 50 elements contained in the data base (i.e., ramps, ATM's, fume hoods, platform lift, telephones, manual doors ... etc.). It became clear to the Committee that some elements could not be relegated to a single priority ranking. For example, toilet rooms are contained in both category Priority 2 and 4. The committee decided that "essential"<sup>3</sup> campus buildings should have at least 1 accessible toilet room per sex as Priority 2 and that additional toilet rooms should be made accessible for greater convenience, as a Priority 4 item.

The committee also placed greater importance on providing accessible public telephones, campus phones, and emergency phones. Telephones are not specifically mentioned in the Title III priorities. The committee decided that at least one exterior TDD (Telephone Device for the Deaf) be provided on each campus as a Priority 1 and that three interior TDD's be provided on campus as a Priority 3.

The committee placed greater emphasis on the need for exterior signage (Priority 1) to help direct those who are visually or hearing impaired.

Greater emphasis was also placed on issues of life safety for the disabled. A minimum of two means of egress from each "essential" building should be provided as Priority 1. Also two areas of rescue assistance should be provided as a Priority 2 in multi-story buildings which are not equipped with an automatic sprinkler system.

The Title II Regulations are very specific concerning the time frame for compliance. When structural changes in facilities are required to comply with the regulations, these changes shall be made within three years of the date of implementation of the regulations

---

<sup>3</sup> "Essential" campus buildings are those which house university program space. "Non-Essential" buildings contain no program space and are limited to storage buildings, sheds, mechanical buildings etc. Refer to the building list contained in the Appendix, Item B.

which was January 26, 1992. In any event, this work should be completed as expeditiously as possible.

To comply with the intent of Title II, i.e., program access compliance, and assuming other methods of compliance are not a viable option, then all the Priority 1, 2, and 3 items of non-compliance should be corrected within the required three year period. The Priority 4 items of non-compliance do not deny program access as envisioned by the regulations. These elements should be corrected, on a case-by-case basis to meet the needs of disabled students or staff, or undertaken in future years as a continuing effort to improve the accessibility of the campus. It is recommended that as corrective action is undertaken, that remaining barriers be reprioritized by the campus until eventually all of the recommended corrective work has been completed.

Many of the items of non-compliance listed in the Priority 1, 2, 3 categories do not necessarily deny access. They simply do not comply fully with the ADA (ADAAG) Guidelines. These deviations could be very minor in many instances. No judgment call for acceptable "tolerances" or "deviations" from the ADA criteria was established in the compliance tables. Such judgments must be made at the campus level by the official responsible. An example would be that virtually no curb ramps comply fully with the new ADA criteria. However, if a curb ramp met all the criteria except that it had a 5° slope instead of 4.76°, should it be demolished and replaced as a Priority 1 item? Especially when curb cuts are required but not provided in other paths of travel. Certainly the campuses will have to engage in a dialogue with the physical plant, office of the Disabled Student Services and the President's office to determine which items of non-compliance deny access. Another example would be a situation where a ramp provides an alternative path of travel around a stair. Modifications to make the stair usable by people with mobility impairments would be a low priority since an alternative accessible path is provided.

The following is a listing of the Priorities for Barrier Removal developed by the CSU Access Committee. The non-compliant elements contained in the data base were prioritized on this basis (refer to Section 8):

## PRIORITIES FOR BARRIER REMOVAL

The following are proposed priorities for developing the transition plan. Under each heading is the list of items that would be recommended if not already accessible.

| <u>Priority 1: General Access to Sites and Buildings</u>  | <u>YEAR 1</u> | <u>Rules:</u>  |
|---|---------------|--|
| - parking and passenger loading areas - disperse around the campus reserved spaces for disabled people, for both cars and vans      |               | - Analysis direct from compliance tables and C.A.C. <sup>1</sup> . Add all the parking lots/structures together for a total count of the required Place as close as possible to accessible building entrances.   |
| - at least 2 primary entrances/exits to "essential" campus buildings  |               | number of van and car spaces. Place as close as possible to accessible building entrances.   |
| - pedestrian circulation to all buildings and facilities (including protruding objects, if they deny access)                        |               | - Select the two least expensive entry doors, if 2 accessible entries exist no more are required as Priority 1.  |
| - exterior pay telephones, including at least 1 public TDD in a central location  |               | - List all walks, curb-ramps, exterior stairs, exterior ramps  |
| - emergency telephones  |               | - List exterior phones and add to data base - install 1 exterior TDD in a central protected location on campus.  |
| - exterior building signage and one tactile campus map at a central location  |               | - Analysis direct from Compliance Tables and C.A.C.  |
|   |               | - Provide a building sign at the two accessible entrances and directional signs at the inaccessible entrances to lead the disabled to the accessible entries. Provide a tactile campus map for orientation to the campus for people with visual impairments. Display the map in a central location such as the library or Disabled Student Service Office. |
| - stairs at entries (if they occur in the accessible path of travel)  |               | - Analyze data for stairs at entries and select based on response to Question 170, Element 49, for exterior stairs only.   |
| When campus access is limited due to distance or topography, then an accessible transportation system is recommended to be provided |               | - Provide an accessible campus transportation system, i.e., a van with a wheelchair lift. Establish on an as needed basis a pickup delivery schedule for disabled students.  |

<sup>1</sup> Compliance Tables are contained in Section 9. C.A.C. are the Corrective Action Codes., examples of which are contained in Section 7.

**Priority 2: Basic Access to Program Areas and Essential Support Spaces/Elements**      **YEAR 2**      **Rules:**

- interior circulation elements to all program spaces, including doors, corridors, ramps, elevators, elevator lobbies, platform lifts, turnstiles, check out aisles (including protruding objects, if they deny access)

- one toilet room/sex in each building on an entry floor (if provided)

- Analysis direct from Compliance Tables and C.A.C.

- Select least expensive toilet rooms on an "entry" level i.e., has entry doors or "E" doors; if no restrooms are provided on an entry floor select the least expensive toilets on any other floor level served by an elevator. If none exist, no corrective action is required as Priority 2.

- all elements in dressing/locker rooms

- Analysis direct from Compliance Tables include all locker areas.

- at least 1 drinking fountain per building (if provided)

- Modify least expensive, preferred on "entry" level. If none exist, no corrective action is required as Priority 2.

- at least one public telephone per building (if provided)

- Modify least expensive, preferred on "entry" level. If no phones exist, no corrective action is required as Priority 2.

- accessible student housing - including a range of types of units (if provided)

- Appropriate number to be based on the unit types, i.e., 1 bedroom, 2 bedroom, 3 bedroom, etc. Including visual alarms, telephones and notification devices .

- cafeterias

- Analysis direct from Compliance Tables and C.A.C.

- library areas

- Analysis direct from Compliance Tables and C.A.C.

- add sprinklers or at least 2 rescue assistance areas per floor above grade level

- Analysis direct from Compliance Tables and C.A.C. 2 required per floor above grade level, if served by an elevator and not sprinklered.

- alarm systems and fire alarm stations

- Analysis of fire alarm pull stations direct from Compliance Tables and C.A.C.; the visual/ audible alarms relate to 2 other elements, #27 Sink/Lavatory and #22 Seating/ Assembly.

- seating/assembly areas

- Analysis direct from Compliance Tables and C.A.C.

- accessible science/computer lab station including one fume hood (if provided)

- Analysis direct from Compliance Tables and C.A.C.

- stadium seating

- Analysis direct from Compliance Tables and C.A.C.

- stage/speaker platforms

- Analysis direct from Compliance Tables and C.A.C.

- swimming pools

- Analysis direct from Compliance Tables and C.A.C.

**Priority 3: Important Additional Support Services**

**YEAR 3**

**Rules:**

- at least two entrances/exits to "non-essential" buildings (e.g. physical plant department)

- Select the 2 least expensive entry, if two are already accessible no more are required as Priority 3. Refer to building list for "Essential" vs. "Non-Essential" status.

|  |  |
|--|--|
| - interior building signage  | - Analysis direct from the Compliance Tables and C.A.C.  |
| - showers - in non essential buildings   | - Analysis direct from Compliance Tables and C.A.C.  |
| - changing areas   | - Analysis direct from Compliance Tables and C.A.C.  |
| - at least one work area in spaces where provided  | - Analysis direct from Compliance Tables and C.A.C.  |
| - service counters   | - Analysis direct from Compliance Tables and C.A.C.  |
| - kitchen appliances   | - Analysis direct from Compliance Tables and C.A.C.  |
| - at least one laundry room where provided   | - Analysis direct from Compliance Tables and C.A.C.  |
| - mailboxes  | - Analysis direct from Compliance Tables and C.A.C.  |
| - 1 TDD in the library, student union building and the office of disabled student services | - Provide a minimum of 3 TDD's in prominent accessible locations in the Library, Student Union Building and the Office of Disabled Student Services (if none exist). Provide additional TDD's on an as needed basis as requested by Disabled Students and Staff. |
| - locker areas (not changing areas, only storage)  | - Analysis direct from the Compliance Tables and C.A.C.  |
| - ATM Machines   | - Analysis direct from the Compliance Tables and C.A.C.  |

**Priority 4: Comprehensive Accessibility**

**FUTURE YEARS**

**Rules:**

- new elevators (to buildings not already served by elevators or by an alternative accessible path of travel). Provide areas of rescue assistance at same time.

- interior circulation elements on all floors to be served by new elevators

- additional entrances/exits

- additional toilet rooms (including new toilet rooms if none provided)

- stairways (not in the accessible path of travel)

- storage areas

- windows

- emergency eyewash/shower

- accident prevention, including carpet and additional protruding objects

- additional drinking fountains (all remaining)

- additional telephones (all remaining)

- bathtubs

- quiet areas

- fixed tables

- additional science/computer lab stations and additional fume hoods (all remaining)

- electrical systems

- Analysis direct from Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Add to the data base, provide a new accessible unisex toilet room, when no toilet rooms exist in the building. Additional toilet rooms analysis direct from Compliance Tables and C.A.C.

- Include all interior stairways (Question 175, Element 49) which are not in the path of travel (Question 170, Element 49).

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Add to the data base, "Install new drinking fountains where drinking fountain is provided.

- or modify drinking fountains as per Compliance Tables and C.A.C.

- Install new accessible telephone where no telephone is provided.

- or modify existing telephones as per Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis direct from the Compliance Tables and C.A.C.

- Analysis on a building basis as per C.A.C., related to room count.

**TABLE 1**

**SLEEPING ACCOMMODATIONS**

Visual Alarms, Notification Devices, and Telephones shall be provided in conformance with the following table:

| <u>Number of Rooms</u> | <u>Accessible Rooms</u>      | <u>Rooms with Roll-in Showers</u>           | <u>Number of Elements</u> | <u>Accessible Elements</u>       |
|------------------------|------------------------------|---|---------------------------|----------------------------------|
| 1 to 25                | 1                            |   | 1 to 25                   | 1                                |
| 26 to 50               | 2                            |   | 26 to 50                  | 2                                |
| 51 to 75               | 3                            | 1   | 51 to 75                  | 3                                |
| 76 to 100              | 4                            | 1   | 76 to 100                 | 4                                |
| 101 to 150             | 5                            | 2   | 101 to 150                | 5                                |
| 151 to 200             | 6                            | 2   | 151 to 200                | 6                                |
| 201 to 300             | 7                            | 3   | 201 to 300                | 7                                |
| 301 to 400             | 8                            | 4   | 300 to 400                | 8                                |
| 401 to 500             | 9                            | 4 plus one for each additional 100 over 400 | 401 to 500                | 9                                |
| 501 to 1000            | 2% of total                  |   | 501 to 1000               | 2% of total                      |
| 1001 to over           | 20 plus 1 for each over 1000 |   | 1001 and over             | 20 plus 1 for each 100 over 1000 |

## **SECTION 4**

### ***INPUT FROM FORUMS AND QUESTIONNAIRES***

## **SECTION 4**

### ***LISTING OF MAJOR CONCERNS VOICED AT ADA FORUM, IN QUESTIONNAIRES AND FROM BUILDING COMMENT SHEETS***

#### **CAMPUS: San Luis Obispo**

The following listing is a summary analysis highlighting the primary concerns and suggestions by the faculty, staff and students with disabilities. The source of this listing includes the questionnaires concerning architectural barriers on campus distributed by the office of Disabled Students Services, concerns raised at the ADA Forum held on campus and from the building comment sheets completed by our team while surveying the campus.

The concerns listed below are the unedited issues voiced by the disabled community. These statements may or may not be accurate. The raised items which are covered by the scope of the ADA have been surveyed and the results are included in the Architectural Barrier Inventory, contained in Section 8, if the item was determined to be non-compliant. Items surveyed found to be in compliance are contained in the data base, but are not listed in section 8. Items of concern which are not covered by the scope of ADA have not been addressed by this report.

#### **1. Parking:**

**1.1.** An inadequate number of accessible parking stalls are provided adjacent to the Student Health Center. One disabled parking space has been removed from the Student Health Center. The only accessible parking available is on the street, and has a 4 degree slope.

**1.2.** There is a need for additional accessible parking spaces to be located near the bookstore. Access to the interior road requires a special card which is difficult to acquire.

**1.3.** There is a need for an additional accessible parking space by Building 36.

#### **2. Curb Cuts or Curb Ramps:**

**2.1.** The curb cut at the corner of Via Carta and North Perimeter (adjacent to Building 38) is too steep.

**2.2.** The curb cut adjacent to the Math and Home Economics building is too steep and is dangerous for the disabled to use.

### **3. Exterior Walkways:**

**3.1.** Sidewalks throughout the campus exceed the maximum slope allowed by the ADA regulations. The exterior path of travel requires much strength and stamina.

**3.2.** The walkway on the west side of the Music building slopes and is steep and dangerous for persons with mobility impairments.

### **4. Exterior Stairs:**

**4.1.** There is a lack of color contrasting stripes on exterior stair treads especially at the Architecture and the Kennedy Library.

**4.2.** The exterior stairs at the Architecture building lack handrails.

### **5. Exterior Ramps:**

**5.1.** The exterior ramp on the north side of the Student Health Center has no level rest areas and lacks handrails.

**5.2.** The ramp between the accessible parking spaces in lot C9 and the West side of the new Business Administration building is very long, steep and has no rest areas or handrails.

**5.3.** Building 52 (Science) has steep ramps at the east entries. In addition the ramps lack handrails.

### **6. Elevators:**

**6.1.** Building 12 (Air Conditioning Engineering) has no elevator. Disabled students are unable to attend any classes on the second floor.

**6.2.** The elevator in the Science building North requires a key. Inserting and turning the key requires a tight grasp and twist which is not allowed under ADA regulations.

**6.3.** The elevator in the Engineering West building and is frequently out of service.

**6.4.** Building 14 (Computer Science) has no elevator, although it is three story high.

### **7. Interior Ramps:**

No concerns were raised regarding interior ramps.

### **8. Interior Steps:**

No concerns were raised regarding interior steps.

**9. Entrance doors:**

9.1. The doors to the new Business building are reportedly difficult to open due to excessive door pressure.

9.2. There was a request to install automatic doors in the Administration building.

**10. Interior Doors:**

10.1. Most interior doors are equipped with knob handles. Lever hardware is required by ADA.

**11. Drinking Fountains:**

11.1. Most drinking fountains are mounted too high for wheelchair users.

**12. Toilet Rooms:.**

12.1. There are no doors to the men's toilet stalls on the second floor of the University Union.

12.2. The women toilet rooms in Building 52 are not accessible to wheelchair users due to narrow entry vestibule clearances.

12.3. The toilet rooms in building 10 and in the Snack Bar are equipped with foot operated flush valves. Many persons with disabilities can not operate these valves.

**13. Alarms Systems:**

13.1. There is a lack of visual fire alarms for the hearing impaired.

**14. Signage:**

14.1. Exterior signage is not properly designed or located to direct disabled individuals to accessible entrances, ramps, etc.

14.2. Pictograms are not provided on accessible toilet room door.

**15. Telephones:**

15.1. Public telephones and emergency phones are installed too high.

15.2. There was a request for TDD's to be provided at central locations such as the library.

15.3. The Snack Bar telephone booths are too small to enter for wheelchair users.

**16. Built-in Seating and Tables:**

No major concerns were raised regarding built-in Seating and tables.

**17. Assembly Areas:**

17.1. There are no accessible seating areas at the stadium.

**18. Automated Teller Machines:**

No concerns were raised regarding automated teller machines.

**19. Libraries:**

19.1. Most of the stacks in the Robert Kennedy Library are too narrow and oversize books project into the aisles further reducing the clear aisle width.

19.2. Only one accessible computer station is provided on the main floor, additional stations are needed.

**20. Cafeterias:**

No concerns were raised regarding cafeterias.

**21. Dormitory Rooms or Apartments:**

21.1. In general, the dormitories are not accessible due to the campus topography. Most dormitory buildings have entry ramps with slopes over 10 degrees, or stairs are provided.

21.1. The interior corridors in Yosemite Hall are only 23 inches wide.

**22. Sport Facilities:**

No concerns were raised regarding the sport facilities.

**23. Other Issues:**

23.1. The Faculty Office Building East (building 25) is not accessible to wheelchair users due to steep entry ramps, and the lack of proper signage.

23.2. The location of the Disabled Student Services is on the upper floor of the University Union building. This location is difficult to reach for students with mobility impairments.

23.3. Although not addressed by ADA, lighting issues were raised at the ADA forum. Site lighting is inadequate and should be studied by the campus.

23.4. There is a concern that room Arch 224 has ripped carpeting which is hazardous to persons with visual or mobility impairments. This same room has a protruding work station that is a hazard to the visually impaired.

23.5. Room 301 in the Business Administration and Education building has no accessible work stations.

**23.6.** Room 104 A in the Learning Center is inaccessible to individuals in wheelchairs due to a lack of turning space within the room.

**23.7.** Braille signs are not provided at the vending machines.

**23.8.** Bicycles which are padlocked to stair or ramp handrails create a hazard for individuals who are visually impaired.

## **SECTION 5**

### ***SITE ACCESS***

#### **PREFACE:**

The goals for compliance contained in Section 5 and 6 are generally in accordance with the ADA Regulations. When the goals exceeded the Regulations, they are highlighted in italics. The Access Committee occasionally exceeded the Regulations in their recommendations to meet the "program access" intent of the ADA.

## **SECTION 5**

### ***SITE ACCESS***

#### **A. PARKING AND PASSENGER LOADING ZONES (ADAAG Section 4.6).**

##### **1.1 Minimum Number of Spaces Required**

**ADA Regulations:** The current ADA regulations require the following minimum number of accessible spaces:

| <b>Total Parking<br/>in lot</b> | <b>Required Minimum Number<br/>of Accessible Spaces</b> |
|---------------------------------|---|
| 1 to 25                         | 1   |
| 26 to 50                        | 2   |
| 51 to 75                        | 3   |
| 76 to 100                       | 4   |
| 101 to 150                      | 5   |
| 151 to 200                      | 6   |
| 201 to 300                      | 7   |
| 301 to 400                      | 8   |
| 401 to 500                      | 9   |
| 501 to 1000                     | 2 percent of total                                      |
| 1001 and over                   | 20 plus 1 for each 100 over 1000                        |

The disabled parking spaces may be distributed through several lots if equivalent or greater accessibility is insured.

**Statement of Existing Conditions:** The total number of parking spaces has been entered into the data base for all lots and parking structures on campus. Although some campuses have the minimum required number of accessible parking spaces based typically on the requirements of Title 24, the State Building Code, it is apparent from the voiced concerns of the disabled that not enough parking spaces are provided on the campuses. The rate of required parking spaces based on ADA is far more restrictive than the existing Title 24 and requires approximately twice the number of accessible spaces. Accessible parking is not provided adjacent to the Student Health Center. The only parking available for the disabled is on the adjacent street and is on a 4 degree slope.

**Goal for Compliance:** Provide more accessible parking spaces to satisfy the demand of the disabled student population on campus, and to meet the ADA regulations. Base the

number of required stalls on the total parking count including all lots and structures. Do not allocate accessible spaces on a lot by lot basis. Remote lots, a long distance from any university program space, or which are located at much higher or lower elevation than the campus facilities need not have accessible parking stalls. Disperse the required number of accessible parking stalls which are served by accessible paths of travel, as close as possible to the university "essential" buildings.

## **1.2 Location**

**ADA Regulations:** Accessible parking spaces serving a particular building should be located on the shortest accessible route of travel from adjacent parking to an accessible entrance. In buildings with multiple accessible entrances, accessible parking spaces should be dispersed and located as close as possible to the accessible entrances.

**Statement of Existing Conditions:** The most common concern raised at the ADA Public Forum and the Questionnaire Concerning Architectural Barriers on Campus was the fact that accessible parking spaces were located too far from the accessible entrances. There is a need for more accessible parking spaces adjacent to the bookstore, and by Building 36.

**Goal for Compliance:** Create a parking plan with the input of the Disabled Student Services locating accessible parking spaces closer to accessible building entrances. Refer to the color coded campus access plan included in the Appendix, item C.

## **1.3 Parking Spaces and Aisles**

**ADA Regulations:** Accessible parking spaces should be at least 96 inches wide. Parking access aisles should be part of an accessible route to the building or facility entrance. The access aisle should be 60 inches wide minimum. Two accessible parking spaces may share a common access aisle. Parked vehicle overhangs should not reduce the clear width of an accessible route. Parking spaces and access aisles should be level with surface slopes not exceeding 1:50 (2%) in all directions.

**Statement of Existing Conditions:** Parking conditions vary significantly on the campus, from lot to lot. A common concern from all campuses is that parking is usually not wide enough and lacks an access aisle. On campuses where the topography does not easily permit level stalls, parking spaces often exceed the 1:50 maximum slope allowed by ADA.

**Goal for Compliance:** Restripe the existing accessible parking spaces to be in compliance with the current codes.

#### **1.4 Van Access**

**ADA Regulations:** One in every eight required accessible spaces, but not less than one, should be served by an access aisle 96 in. wide minimum and should be designated "van accessible". This sign should be mounted below the symbol of accessibility. Such signs should be located so that they cannot be obscured by a vehicle parked in the space. A vertical clearance of 98 inches (8'-2") is required at the van parking space and along the vehicle access route to such spaces. Another option would be provide "universal" stalls which require as much space as van stalls but allow use by vans or cars.

**Statement of Existing Conditions :** Properly designed and identified van access aisles are virtually non-existent on all campuses, since this is a new design regulation required by the ADA.

**Goal for Compliance:** Provide van or universal spaces and access aisles in accordance with the ADA regulations. *Van spaces required inside existing parking structures which do not have the required vertical clearance may need to be relocated outside the parking structure and be covered by a canopy to provide equivalent access.*

#### **1.5 Signage**

**ADA Regulations:** Accessible parking spaces should be designated as reserved by a sign showing the symbol of accessibility. These signs should be located so that they can not be obscured by a vehicle parked in the space (i.e., a sign on a post).

**Statement of Existing Conditions:** The most common concern on all campuses is that signage at accessible parking spaces is not properly labeled and not mounted at the correct height. It should be noted that existing disabled parking stalls which were not identified with the proper signage were not included in the survey count for accessible stalls.

**Goal for Compliance:** Adjust existing signage or install new signage at each accessible parking space.

## **1.6 Passenger Loading Zone**

**ADA Regulations:** Passenger loading zones should provide an access aisle at least 60 in. wide and 20 ft. long adjacent and parallel to the vehicle pull up space. If there are curbs between the access aisle and the vehicle pull-up space, then a curb ramp complying with section 4.7 of the ADA should be provided. Vehicle standing spaces and access aisles should be level with surface slopes not exceeding 1:50 in all directions.

**Statement of Existing Conditions:** Bus stops and other passenger loading zones are provided on nearly all campuses. The existing access aisles in most cases are not designed as specified by the ADA regulations. Typically curb ramps are not provided at these locations.

**Goal for Compliance:** Provide access aisles and curb ramps as specified by ADA at all passenger loading zones.

## **B. TRANSPORTATION SYSTEMS**

**ADA Regulations:** The current ADA regulations have no specific regulations concerning the requirement for providing an accessible transportation system or specific design requirements for such a system.

**Statement of Existing Conditions:** The campus presently owns and operate an accessible transportation system. A van that is wheelchair accessible transports students around the campus on an appointment basis.

**Goal for Compliance:** No corrective action is required on this item.

## **C. SITE CONTINUITY**

### **1.1 Curb Ramps (ADAAG Section 4.7)**

#### **1.1.1 Running Slopes and Flared Side Slopes**

**ADA Regulations:** The maximum running slope of curb ramps should be 1:12 (8.33% or 4.7 degrees). If a curb ramp is located where pedestrians must walk across the ramp, or where it is protected by handrails or guardrails, it should have flared sides; the maximum slope should be 1:10 (10% or 5.7 degrees). Curb ramps with returned curbs may be used where pedestrians would not normally walk across the ramp.

**Statement of Existing Conditions:** The vast majority of curb ramps surveyed had running slopes and flared sides greater than the maximum allowed by the regulations. Many of these curb ramps were designed to allow use by service vehicles, not to permit access by the disabled.

**Goal for Compliance:** Adjust the curb ramps to have running slopes not exceeding 4.7 degrees and flared sides not exceeding 5.7 degrees. Install new curb ramps where an accessible route meets a curb, or change in level. The priority to remove architectural barriers should place more emphasis on installing new curb ramps where they are required but not provided, than on modifying existing curb ramps which do not fully comply with the ADA criteria.

## **1.2 Ramps (ADAAG Section 4.8)**

**ADA Regulations:** Any part of an accessible route with a slope greater than 1:20 (5% or 2.8 degrees) is considered a ramp, and should be designed to meet the criteria for ramps.

**1.2.1 Slope:** The least possible slope should be used for any ramp. The maximum slope of a ramp in new construction should be 1:12 (8.33% or 4.7 degrees). The maximum rise for any run should be 30 inches. Curb ramps and ramps to be constructed on existing sites or in existing building or facilities may have slopes and rises between 1:10 and 1:12 for a maximum rise of six inches, a slope between 1:8 and 1:10 for a maximum rise of three inches if space limitations prohibit the use of a 1:12 slope or less. A slope steeper than 1:8 is not allowed.

**1.2.2 Clear Width:** The minimum clear width of a ramp should be 36 inches.

**1.2.3 Ramp Landings:** Ramps should have level landings at bottom and top of each ramp and each ramp run. Landings should have the following:

- The landing should be at least as wide as the ramp leading to it.

- The landing length should be a minimum of 60 inches.
- If ramps change directions at landings, the minimum landing size should be 60 inches by 60 inches.
- If a doorway is located at a landing, then the area in front of the doorway should comply with 4.13.6. which states that the front clearance at the door should be 60 inches and the width at the top landing should be the door width plus 24 inches at the strike side of the door.

**1.2.4 Handrails:** If a ramp run has a rise greater than 6 inches or a horizontal projection greater than 72 inches, then it should have handrails on both sides. Handrails are not required on curb ramps or adjacent to seating in assembly areas. Handrails should have the following features:

- Handrails should be provided along both sides of ramp segments.
- If handrails are not continuous, they should extend at least 12 inches beyond the top and bottom of the ramp segment and should be parallel with floor or ground surface. The wooden handrails are not continuous at the bottom of the ramp.
- The clear space between the handrail and the wall should be 1-1/2 inch.
- Gripping surfaces should be continuous.
- Top of handrail gripping surfaces should be mounted between 34 and 38 inches above ramp surfaces.
- Ends of handrails should be either rounded or returned smoothly to floor, wall or post.
- Handrails should not rotate in their fittings.

**1.2.5 Cross Slope and Surfaces:** The cross slope of ramp surfaces should not be greater than 1:50 (2% or 1.2 degrees).

**1.2.6 Edge Protection:** Ramps and landings with drop-offs should have curbs, walls, railings or projecting surfaces that prevent people from slipping off the ramp. Curbs should be a minimum of 2 inches.

**1.2.7 Outdoor Conditions:** Outdoor ramps and their approaches should be designed so that water will not accumulate on walking surfaces.

**Statement of Existing Conditions:** The slope at many exterior and interior ramps is over the allowable slope of 1:12 or 4.76°. Some ramps have handrails on one side only or

no handrails at all. Due to the hilly campus topography, site access is very strenuous for individuals with mobility impairments and most of the sidewalks exceed the maximum allowable slope for a ramp.

**Goal for Compliance:** Modify the slope at ramps to be 1:12 maximum. Provide handrails on both sides of ramps. Install level rest areas along ramps at 30' intervals. All campus walkways which exceed a slope of 2.8° shall be redesigned to meet the criteria for ramps.

### **1.3. Stairs (ADAAG Section 4.9)**

#### **ADA Regulations:**

**1.3.1 Treads and Risers:** On any given flight of stairs, all steps should have uniform riser heights and uniform tread widths. Stairs treads should be no less than 11 inches wide measured from riser to riser. Open risers are not permitted.

**1.3.2 Nosings:** The undersides of nosings should not be abrupt. The radius of curvature at the leading edge of the tread should be no greater than 1/2 inch. Risers should be sloped or the underside of the nosing should have an angle not less than 60 degrees from the horizontal. Nosings should project no more than 1/2 inch.

**1.3.3 Handrails:** Stairways should have handrails at both sides of all stairs and should have the following features:

- Handrails should be continuous along both sides of stairs. The inside handrail on switchback or dogleg stairs should always be continuous.
- If handrails are not continuous, they should extend at least 12 inches beyond the top riser and at least 12 inches plus the width of one tread beyond the bottom riser. At the top, the extension should be parallel with the floor or ground surface. At the bottom, the handrail should continue to slope for a distance of the width of one tread from the bottom riser; the remainder of the extension should be horizontal.
- The clear space between the handrails and wall should be 1-1/2 inch.
- Gripping surfaces should be uninterrupted by newel posts, other construction elements, or obstructions.
- Top of handrail gripping surfaces should be mounted between 34 and 38 inches above stair nosings.

- Ends of handrails should be either rounded or returned smoothly to floor, wall or post.
- Handrails should not rotate within their fittings.

**Statement of Existing Conditions:** The most common violations found at exterior and interior stairs are the lack of contrasting color stripes on stair treads, handrails not at the height or not extended as required by the code and open risers. The exterior stairs at the Architecture Building lack color stripes and handrails.

**Goal for Compliance:** Install contrasting color stripes at all exterior stairs, adjust the handrail height and handrail extension and fill-in open risers as required. Stairs which occur in the only path of travel to an essential facility will need to be replaced by an alternative accessible path of travel i.e., a ramp or platform lift.

#### **D. EXTERIOR SIGNAGE (ADAAG Section 4.30)**

##### **ADA Regulations:**

**1.1 Character Proportion:** The ADA regulation requires that the signage for the doors should be equipped with raised character signs. The character proportion should be a width-to-height ratio between 3:5 and 1:1 and a stroke-width-to-height ratio between 1:5 and 1:10.

**1.2 Character Height:** The Minimum character height should be 3 inches (for overhead directional or informational signs).

**1.3 Raised and Braille Characters and Pictorial Symbol Signs:** Letters and numerals should be raised 1/32 inch in upper case, sans serif or simple serif type, and should be accompanied with Grade 2 Braille. Raised characters should be at least 5/8 inch high, but no higher than 2 inches. Pictograms should be accompanied by the equivalent verbal description placed directly below the pictogram. The border dimension of the pictogram should be 6 inches minimum in height.

**1.4 Finish and Contrast:** The characters and background of signs should be eggshell, matte or other non-glare finish. Characters and symbols should contrast with their

background - either light characters on a dark background or dark characters on a light background.

**1.5 Mounting Location and Height:** The identification signs for rooms and spaces should be installed on the wall adjacent to the latch side of the entry door. When there is no wall space to the latch side of the door, signs should be placed on the nearest adjacent wall. Mounting should be 60 inches above the finish floor to the centerline of the sign.

**Statement of Existing Conditions:** Exterior signage is very limited on the campus. Signs to identify the accessible path of travel to the accessible building entrances do not exist. Building signage is inadequate for persons with visual impairments, especially at night. Signs to identify the accessible door at the building entrance when multiple doors exist are not provided.

**Goal for Compliance:** *A tactile map of the campus should be installed at a central location showing the location of all accessible parking, accessible paths of travel to campus buildings, building names and accessible entrances. This would be useful as an orientation aid for visually impaired visitors, staff and students.* International signs of access should be mounted on accessible entrances. Also signs of access should be located to direct persons in wheelchairs to the accessible entrance(s) and paths. All building signage should be properly designed and illuminated. *It is recommended that a campus signage program be undertaken to provide signage in accordance with the ADA regulations.*

## **E. EXTERIOR TELEPHONES/EMERGENCY PHONES (ADAAG Section 4.31)**

### **ADA Regulations:**

**1.1 Clear Floor or Ground Space:** A clear floor space at least 30 inches by 48 inches that allows either a forward or parallel approach by a person using a wheelchair should be provided at telephones. Bases, enclosures, and fixed seats should not impede approaches to telephones by people who use wheelchairs.

**1.2 Mounting Height:** The highest operable part of the telephone should be within the ranges specified as follows: the maximum high forward reach allowed should be 48 inches and the maximum high side reach allowed should be 54 inches.

**1.3 Protruding Objects:** Telephones with their leading edges between 27 inches and 80 inches above the finished floor should protrude no more than 4 inches into walks, halls, corridors, passageways, or aisles.

**1.4 Hearing Aid Compatible and Volume Control Telephones:** Telephones should be hearing aid compatible. Volume controls, capable of a minimum of 12 dbA and a maximum of 18 dbA above normal should be provided.

**1.5 Controls:** Telephones should have push button controls where service for such equipment is available.

**1.6 Telephone Books:** Telephone books if provided should be located in a position that complies with the following: the maximum high forward reach allowed should be 48 inches and the maximum high side reach allowed should be 54 inches.

**1.7 Cord Length:** The cord from the telephone to the handset should be at least 29 inches long.

**1.8 Text Telephone Required:** Text telephones used with a pay telephone should be permanently affixed within, or adjacent to the telephone enclosure. If an acoustic coupler is used, the telephone cord should be sufficiently long to allow connection of the text telephone and the telephone receiver.

Pay telephones designed to accommodate a portable text telephone should be equipped with a shelf and an electrical outlet within or adjacent to the telephone enclosure. The telephone handset should be capable of being placed flush on the surface of the shelf. The shelf should be capable of accommodating a text telephone and should have 6 inches minimum vertical clearance in the area where the text telephone is to be placed.

**Statement of Existing Conditions:** The major concern expressed about exterior telephones is that the controls are mounted too high, they are not equipped with amplification devices and that there is a lack of TDD's (Telecommunication Devices for the Deaf) for the hearing impaired.

Many of these emergency telephones are mounted at the correct height but they are not installed on the concrete walkways but are surrounded by grass, which denies access by the people who use wheelchairs.

**Goal for Compliance:** An appropriate number of the exterior telephones should be made accessible by lowering their mounting height, and adding amplifying devices. *At least one exterior public TDD should be installed at a central protected location on campus. All emergency phones should be made accessible.*

## **F. LIFE SAFETY/HAZARDS**

### **1.1 Protruding Objects (ADAAG Section 4.4)**

#### **ADA Regulations:**

**1.1.1 General:** Objects projecting from wall ( for example telephones) with their leading edges between 27 inches and 80 inches above the finished floor should protrude no more than 4 inches into walks, hall, corridors, passageways, or aisles. Objects mounted with their leading edges at or below 27 inches above the finished floor may protrude any amount. Free-standing objects mounted on posts or pylons may overhang 12 inches maximum from 27 inches to 80 inches above the ground or finished floor. Protruding objects should not reduce the clear width of an accessible route or maneuvering space.

**1.1.2 Head Room:** Walks, halls, corridors, passageways, aisles or other circulation spaces should have 80 inches minimum clear head room. If vertical clearance of an area adjoining an accessible route is reduced to less than 80 inches, a barrier to warn blind or visually-impaired persons should be provided.

**Statement of Existing Conditions:** There were no serious hazards surveyed on the campus. In some instances, service counters project into hallways, making them protruding objects.

A concern voiced at the ADA forum and in questionnaires is that during construction time on many campuses, accessible walkways are often blocked by construction materials, trash bins, etc., forcing students in wheelchair to make unnecessary and often lengthy detours. This situation has lead to minor accidents.

**Goal for Compliance:** Service counters projecting into hallways should be adjusted to have their leading edge below 27 inches. Construction zones should be fenced and an accessible alternate path of travel should be provided in the immediate surroundings of the construction site.

### **1.2 Detectable Warnings on Walking Surfaces ( ADAAG Section 4.29.2)**

A detectable warning is a standardized surface feature built in or applied to walking surfaces of other elements to warn visually impaired people of hazards on a circulation path. They are usually required on walking surfaces where they cross or adjoin vehicular ways or other environmental hazards of a similar nature when there is no curb, wall, or railing to alert a pedestrian with a vision impairment passing from an area of safety into an area of potential danger.

**ADA Regulations:** Detectable warnings should consist of raised truncated domes with a diameter of nominal 0.9 inch, a height of nominal 0.2 inch and a center to center spacing of nominal 2.35 inches and should contrast visually with adjoining surfaces, either light on dark or dark-on-light.

**Statement of Existing Conditions:** Detectable warnings although required by ADA, have become a source of complaints to the Architectural and Transportation Barriers Compliance Board and therefore this requirement is currently under review by the Department of Justice. Many of the existing curb ramps on campus do not have either truncated domes or the directional grooves required by Title 24, the State Building Code.

**Goal for Compliance:** *No corrective action is recommended until this issue is resolved by the Compliance Board, or once Title 24 has been "certified" by the Department of Justice as being equivalent to ADA.*

### **1.3 Lighting**

**ADA Regulations:** ADA does not address the issue of lighting.

**Statement of Existing Conditions:** Although lighting level is not specifically addressed by the ADA and was not measured throughout the campuses, it was voiced at campus forums. The lack of lighting on campus walks or the insufficient level of lighting in certain areas was a major concern to students with visual impairments.

**Goal for compliance:** *Adequate lighting is a major safety and security issue for both the disabled and non-disabled. Many areas of the campus are not adequately illuminated. Illuminated signs would assist those with visual and hearing impairments. A lighting study should be undertaken at the campus level, with input from the office of Disabled Student Services.*

## **G. ACCESSIBLE ROUTE (ADAAG Section 4.3)**

### **ADA Regulations:**

**1.1 Location:** At least one accessible route within the boundary of the site should be provided from public transportation stops, accessible parking, and accessible passenger loading zones, and public streets or sidewalks to the accessible building entrance they serve. The accessible route should to the maximum extent feasibly coincide with the route for the general public.

**1.2 Width:** The minimum clear width of an accessible route should be 36 inches except at doors.

**1.3 Passing Space:** If an accessible route has less than 60 inches clear width, then passing spaces at least 60 inches by 60 inches should be located at reasonable intervals not to exceed 200 feet. A T-intersection of two walks is an acceptable passing place.

**1.4 Head Room:** Walks or other portions of circulation routes should have 80 inches minimum clear head room. If vertical clearance of an area adjoining an accessible route is reduced to less than 80 inches, a barrier to warn blind or visually impaired persons should be provided.

**1.5 Surface Textures:** Changes in level up to 1/4 inch may be vertical and without edge treatment. Changes in level between 1/4 and 1/2 inch should be leveled with a slope no greater than 1:2. Changes in level greater than 1/2 inch should be accomplished by means of a ramp.

**1.6 Slope:** An accessible route with a running slope greater than 1:20 is a ramp and should be designed as such. Nowhere should the cross slope of an accessible route exceed 1:50.

**1.7 Changes in level:** If an accessible route has changes in level greater than 1/2 inch, then a curb ramp, ramp, elevator or platform lift should be provided.

**Statement of Existing Conditions:** Accessible routes from parking spaces to accessible building entrances often exceed the maximum slope allowed for a walkway. Access between buildings is also an issue that needs to be addressed. In some instances, architectural barriers along a route prevents persons with mobility impairments from reaching their destination without long and unnecessary detours.

**Goal for Compliance:** Establish a barrier free path of travel from public transportation stops and accessible parking stalls to accessible building entrances. Establish a network of barrier free paths of travel to connect all essential campus facilities. An access coded campus map, indicating accessible parking stalls, paths of travel and accessible entrances should be provided at all campus information and security offices. Refer to the Appendix, item C, for the Access Coded Campus Plan, based on our site survey. Indicate these accessible paths on a tactile campus map that would be centrally located to help disabled persons find the most direct path of travel to their destination. (Refer also to Section D - Exterior Signage, above).

## **SECTION 6**

### ***BUILDING ACCESS***

#### **PREFACE:**

**The goals for compliance contained in Section 5 and 6 are generally in accordance with the ADA Regulations. When the goals exceeded the Regulations, they are highlighted in italics. The Access Committee occasionally exceeded the Regulations in their recommendations to meet the "program access" intent of the ADA.**

## **SECTION 6**

### ***BUILDING ACCESS***

#### **A. BUILDING ENTRANCES AND INTERIOR DOORS (ADAAG Section 4.13)**

##### **ADA Requirements:**

**1.1 Clear Width:** Doorways should have a minimum clear opening of 32 inches with the door open 90 degrees, measured between the face of the door and the opposite stop.

**1.2 Maneuvering Clearances at Doors:** Minimum clearances at exterior doors should be 18 inches minimum, 24 inches preferred on the pull side, strike side of the door.

**1.3 Door Hardware:** Handles, pulls, latches, locks and other operating devices on accessible doors should have a shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist to operate.

**1.4 Door Opening Force:** The ADA regulations do not include criteria the maximum opening pressure required for an exterior door. The ADA does require that the maximum opening pressure for interior doors be a maximum of 5 pounds. The maximum force for pushing or pulling open an exterior door under California Title 24 (Section 3304 i.2) is 8.5 pounds and 5 pounds for an interior door.

**1.5 Doors Closers:** A door when equipped with a closer should take at least 3 seconds to move to a point 3 inches from the latch, measured to the leading edge of the door.

**1.6 Thresholds at Doorways:** Thresholds at doorways should not exceed 3/4 inch in height for exterior sliding doors or 1/2 inch for other types of doors. Raised thresholds and floor level changes at accessible doorways should be beveled with a slope no greater than 1:2.

**1.7 Double-leaf Doorways:** If doorways have two independently operated door leaves, then at least one leaf should have a minimum clear opening of 32 inches. That leaf should be an active leaf.

**1.8 Two Doors in Series:** The minimum space between two hinged or pivoted doors in series should be 48 inches plus the width of any door swinging into the space. Doors in series should swing either in the same direction or away from the space between the doors.

**1.9 Automatic Doors and Power-Assisted Doors:** If an automatic door is used, it should not open to back check faster than 3 seconds and shall require no more than 15 lbf (pound force) to stop the door movement.

**Statement of Existing Conditions:** The database includes a detailed analysis of all the non-complying items related to doors. The major violations throughout the campus are that doors are not often equipped with lever (or other accessible) hardware, doors are too narrow to allow a wheelchair to pass through, door pressure is too heavy, and door vestibules allow inadequate clearance for wheelchair users. Excessive door pressure has been reported at the new Business and the Administration building.

**Goal for Compliance:** A comprehensive study of door opening pressure for both interior and exterior doors was undertaken as a part of this project. A total of 2,168 doors were tested system-wide. The full results of this survey is included in the Appendix, item E. It is recommended that the campus Physical Plant adjust the closer pressure of all doors as a part of routine maintenance on a six month schedule. This work should be treated as an on-going maintenance expense, since door operating pressure changes over time with door use.

*The Access Committee has determined that all essential campus buildings should have a minimum of two accessible primary entrance doorways, as a Priority 1 item of compliance. Additional accessible entrance doors would be required as a Priority 4 for greater convenience. All accessible entrance doors and paths to these entrances should be identified with the international symbol of accessibility. Non-accessible entrances should have a sign indicating the location of the nearest accessible entry.*

All interior doors which occur in the path of travel to "program" spaces, should be made accessible as a Priority 2 item of Compliance. If more than one door is provided to a program space, at least one should be accessible.

## **B. BUILDING EXITS:**

**ADA Regulations:** (ADAAG Section 4.13 (9)) Accessible means of egress shall be provided in the same number as required for exits by Local Building/Life Safety regulations.

**Title 24, Section 3301:** Every building or usable portion thereof shall have at least one exit. A minimum of two exits are required from all upper floor levels (above grade level) when the occupant load is 10 or more.

**Statement of Existing Conditions:** All building surveyed have a minimum of two means of egress. Many buildings, however have only one primary entrance that is accessible to the disabled. In case of an emergency where the primary accessible entrance is blocked, persons in wheelchairs can be prevented from exiting safely. Concerns were also voiced at the ADA Forum, that in case of an emergency where elevators cannot be used, stretchers or wheelchair evacuation devices should be provided on every floor to evacuate persons with mobility impairments.

**Goal for Compliance:** *Provide in every essential campus building at least two accessible means of egress at the grade level. Refer to Section H, Life Safety, for a discussion of exiting requirements from upper floor levels.*

## **C. BUILDING CONTINUITY: (ADAAG Section 4.14.1)**

**ADA Requirements:** An accessible route should be provided to connect all accessible building entrances to all spaces or elements within the building.

**Statement of Existing Conditions:** The majority of buildings on campus have level floor plates. Once access is provided to the entrance doorway access to all rooms is typically achieved. However, in some instances, floor levels are not continuous and are interrupted by a change in level and no accessible alternative path of travel is provided.

**Goal for Compliance:** Access to all program spaces within essential campus buildings should be accomplished as a Priority 2 compliance issues. This may involve installing ramps, platform lifts or elevators (elevators are recommended to be installed in buildings as a Priority 4 compliance issue. This presumes that "program" access can be achieved without the installation of new elevators.).

## **D. VERTICAL ACCESS (ADAAG Section 4.10)**

### **ADA Regulations:**

**1.1 Automatic Operation:** Elevator operation should be automatic. Each car should be equipped with a self leveling feature that will automatically bring the car to floor landings within a tolerance of 1/2 in. under rated loading to zero loading conditions. This self leveling feature should be automatic and independent of the operating device and should correct the overtravel or undertravel.

**1.2 Hall Call Buttons:** Hall call buttons in elevator lobbies and halls should be centered at 42 inches above the floor. Such call buttons should have visual signals to indicate when call is registered and when each call is answered. Call buttons should be a minimum of 3/4 inch in the smallest dimension. The button designating the up direction should be on top. Buttons should be raised or flush. Objects mounted beneath hall call buttons should not project into the elevator lobby more than 4 inches.

**1.3 Hall Lanterns:** A visible and audible signal should be provided at each hoistway entrance to indicate which car is answering a call. Audible signs should sound once for the up direction and twice for the down direction or should have verbal enunciators that say "up" or "down". Visible signal should have the following features:

- Hall call fixtures should be mounted so that their centerline is at least 72 inches above the lobby floor.
- Visual elements should be at least 2-1/2 inches in the smallest dimension.
- Signal should be visible from the vicinity of the hall call button.

**1.4 Raised and Braille Characters on Hoistway Entrances:** All elevator hoistway entrances should have raised and Braille floor designations provided on both jambs. The centerline of the characters should be 60 inches above finish floor. Such characters

should be 2 in. high. Permanently applied plates are acceptable if they are permanently fixed to the jambs.

**1.5 Door Protective and Reopening Device:** Elevator doors should open and close automatically. They should be provided with a reopening device that will stop and reopen a car door and hoistway door automatically if the door becomes obstructed by an object or person. The device should be capable of completing these operations without requiring contact for an obstruction passing through the opening at heights of 5 inches and 29 inches above finish floor. Door reopening devices should remain effective for at least 20 seconds.

**1.6 Door and Signal Timing for Hall Calls:** The minimum acceptable notification time should be 5 seconds.

**1.7 Door Delay for Car Doors:** The minimum time for elevator doors to remain fully open in response to a car call should be 3 seconds.

**1.8 Floor Plan of Elevator Cars:** The floor area of elevator cars should provide space for wheelchairs users to enter the car, maneuver reach of controls, and exit from the car. Acceptable door opening is 36 inches and inside dimensions of elevator cars should be a depth of 51 inches (measured from panel to panel) to 54 inches (measured from the back panel to the face of elevator door) and a width of 68 inches or 80 inches. The clearance between the car platform sill and the edge of the any hoistway should be no greater than 1-1/4 inch.

**1.9 Car Controls:** Elevator control panels should have the following features:

- **Buttons:** All control buttons should be at least 3/4 inch in their smallest dimension. They should be raised or flush.
- **Tactile, Braille and Visual Control Indicators:** All control buttons should be designated by Braille and by raised standard alphabet characters for letters, Arabic characters for numerals, or standard symbols. The call button for the main entry floor should be designated by a raised star at the left of the floor designation. All raised designations for control should be placed immediately to the left of the button to which they apply. Applied plates, permanently attached, are an acceptable means to provide raised control designations. Floor buttons should be

provided with visual indicators to show when each call is registered. The visual indicators should be extinguished when each call is answered

- **Height:** All floor buttons should be no higher than 54 inches above the finish floor for side approach and 48 inches for front approach. Emergency controls, including the emergency alarm and emergency stop, should be grouped at the bottom of the panel and should have their centerline no less than 35 inches above the finish floor.
- **Location:** Controls should be located on a front wall if cars have center opening doors, and at the side wall or at the front wall next to the door if cars have side opening doors.

**1.10 Car Position Indicators:** In elevator cars, a visual car position indicator should be provided above the car control panel or over the door to show the position of the elevator in the hoistway. As the car passes or stops at a floor served by the elevators, the corresponding numerals should illuminate, and an audible signal should sound. Numerals should be a minimum of 1/2 inch high. An automatic verbal announcement of the floor number at which a car stops or which a car passes may be substituted for the audible signal.

**1.11 Emergency Communications:** The highest operable part of a two way communication system should be a maximum of 48 inches from the floor of the car. It should be identified by a raised symbol and lettering and located adjacent to the device. If the system uses a handset, the length of the cord from the panel to the handset should be at least 29 inches. The emergency intercommunication system should not require voice communication.

**Statement of Existing Conditions:** The older existing elevators surveyed throughout the campus do not fully comply with ADA regulations. The newer elevators generally do comply. The most common violations were the inaccessibility of control button both in the car and in the lobby, the lack of Braille signage next to the control buttons, and for the floor identification, the lack of control buttons indicators, and the lack of emergency communication systems. Building 12 (Air Conditioning Engineering and building 12 (Computer Science) do not have elevators although classes are held on the upper floors. The elevator in the Science Building North requires a key to operate which is not permitted under the ADA regulations.

**Goal for Compliance:** Retrofit the existing elevators to remove barriers in accordance with the ADA regulations. This corrective work should be undertaken as a Priority 2 compliance item. Install new elevators to provide access to additional university program space as a Priority 4 item. Many complaints were raised by disabled students, staff and faculty that elevators which provide the only means of access were often out of service. The ADA requires that equipment which provides access should be properly maintained in working condition.

## **E. TOILET ROOMS (ADAAG Section 4.22)**

### **1.1 Toilet Room Doors**

#### **ADA Regulations:**

**1.1.1 Clear Width:** Doorways should have a minimum clear opening of 32 inches with the door open 90 degrees, measured between the face of the door and the opposite stop and doors at stalls should have a minimum clear opening of 32 inches measured between the face of the door and the opposite stop.

**1.2 Maneuvering Clearances at Doors:** Minimum clearances at exterior doors should be 24 inches on the pull side, strike side of the door.

**1.1.3 Door hardware:** Handles, pulls, latches, locks and other operating devices on accessible doors should have a shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist to operate.

**1.1.4 Door Opening Force:** The maximum force for pushing or pulling open an interior door should be 5 pounds.

### **1.2 Toilet Stalls**

**1.2.1 Space in Stall:** There must be 18 inches from one wall to the centerline of the toilet.

**1.2.2 Stall Width and Depth:** The minimum standard depth for a toilet stall should be 56 inches if it is wall-mounted and 59 inches. If it is floor-mounted, its width should be

60 inches. In instances of alteration work where provision of a standard stall is technically infeasible, then a stall 36 inches wide and 66 inches deep (if it is wall mounted) or 69 inches deep (if it is floor mounted) is acceptable.

**1.2.3 Toilet Seat Height:** The height of the toilet seat should be 17 to 19 inches above the floor level.

**1.2.4 Grab Bars:** Grab bars should be provided inside the accessible toilet stall. The diameter or width of the gripping surfaces of a grab bar should be 1-1/4 to 1-1/2 inch or the shape should provide an equivalent gripping surface. The space between the wall and the grab bar should be 1-1/2 inch. Grab bars must be parallel to the ground and mounted 33 inches above floor level. A rear grab bar must be provided that is at least 36 inches in length. A side grab bar must be provided that is at least 42 inches in length.

**1.2.5 Toilet paper dispenser:** Dispensers must be 19 inches minimum above finish floor level and 36 inches maximum from the rear wall.

**1.3 Clear Floor Space:** An unobstructed turning space of 5 foot in diameter should be provided within the accessible toilet room.

**1.4 Urinals:** Urinals should be stall-type or wall hung with an elongated rim at a maximum of 17 inches above the finish floor. A clear floor space 30 by 48 inches should be provided in front of urinals to allow front approach. This clear space could adjoin or overlap an accessible route. Flush controls should be hand operated or automatic, and should be mounted no more than 44 inches above the finish floor.

**1.5 Lavatories:** Lavatories should be mounted with the rim or counter surface no higher than 34 inches above the finish floor. Clearance of at least 29 inches above the finish floor to the bottom of the apron should be provided.

**1.5.1 Clear Floor Space at Lavatories:** A clear floor space 30 by 48 inches should be provided in front of the lavatory to allow front approach. Such clear floor space should adjoin or overlap an accessible route and should extend a maximum of 19 inches underneath the lavatory.

**1.5.2 Exposed Pipes and Surfaces under Lavatories:** Hot water and drain pipes under lavatories should be insulated or otherwise configured to protect against contact. There should not be any abrasive surfaces under lavatories.

**1.5.3 Faucets at lavatories:** Controls and operating mechanisms should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls should be no greater than 5 lbf (pound/force). Lever-operated, push-type and electronically controlled mechanisms are examples of acceptable designs. If self-closing valves are used the faucet should remain open for at least 10 seconds.

**1.6 Mirrors:** Mirrors should be mounted with the bottom edge of the reflecting surface no higher than 40 inches above the finish floor.

**1.7 Towel Dispenser:** Dispenser should be on an accessible route and be at a height of 48 inches if it is a forward reach or 54 inches if it is a side reach.

**1.8 International Symbol of Accessibility at Toilet Rooms:** Accessible toilet and bathing facilities are required to be identified with the international symbol of accessibility on the toilet room entry doors.

**Statement of Existing Conditions:** The most typical architectural barriers surveyed in toilet rooms are the lack of accessible toilet stalls and grab bars, the lack of accessible urinals and lavatories and the improper mounting height of accessories and fixtures. There is also a need to make the restrooms at the field house accessible since they are used on commencement day. The past practice of replacing toilet stall doors with curtains in certain buildings impose on a person's privacy and should be replaced with standard stall doors. Wheelchair users cannot operate the foot operated flush valves found in the toilet rooms for building 10 and the Snack Bar.

**Goal for Compliance:** *Modify one toilet room per sex in each essential campus building to be accessible, preferably on the ground floor level, as a Priority 2 compliance issue. As a Priority 4 compliance issue, modify additional toilet rooms in each essential building or install a new accessible unisex toilet room in buildings if none are currently provided. Rearrange toilet partitions to increase maneuvering space. Install grab bars in*

toilet stalls and modify the mounting height of urinals, lavatories and bathroom accessories to meet the ADA criteria.

## **F. INTERIOR SIGNAGE (ADAAG Section 4.30)**

### **ADA Regulations:**

**1.1 Character Proportion:** The ADA regulation requires that the signage for the doors should be equipped with raised character signs. The character proportion should be a width-to-height ratio between 3:5 and 1:1 and a stroke-width-to-height ratio between 1:5 and 1:10.

**1.2 Character Height:** The Minimum character height should be 3 inches (for overhead directional of informational signs).

**1.3 Raised and Braille Characters and Pictorial Symbol Signs:** Letters and numerals should be raised 1/32 inch in upper case, sans serif or simple serif type, and should be accompanied with Grade 2 Braille. Raised characters should be at least 5/8 inch high, but no higher than 2 inches. Pictograms should be accompanied by the equivalent verbal description placed directly below the pictogram. The border dimension of the pictogram should be 6 inches minimum in height.

**1.4 Finish and Contrast:** The characters and background of signs should be eggshell, matte or other non-glare finish. Characters and symbols should contrast with their background - either light characters on a dark background or dark characters on a light background.

**1.5 Mounting Location and Height:** The identification signs for rooms and spaces should be installed on the wall adjacent to the latch side of the entry door. When there is no wall space to the latch side of the door, signs should be placed on the nearest adjacent wall. Mounting should be 60 inches above the finish floor to the centerline of the sign.

**Statement of Existing Conditions:** Typically Brailled signage is not provided adjacent to interior doors, elevators lack braille signage on the elevator door jambs, door signs are mounted at the wrong height or location, and pictograms are very rarely provided on

toilet room doors. Many toilet room doors which display the international sign of accessibility are not fully accessible.

**Goal for Compliance:** *A comprehensive signage program (interior and exterior) should be undertaken for the campus to comply with the ADA regulations.* The ADA database includes the cost to install new room signage, but not for the related professional services to develop the signage system.

## **G. INTERIOR TELEPHONES/EMERGENCY PHONES (ADAAG Section 4.31)**

### **ADA Regulations:**

**1.1 Clear Floor or Ground Space:** A clear floor space at least 30 inches by 48 inches that allows either a forward or parallel approach by a person using a wheelchair should be provided at telephones. Bases, enclosures, and fixed seats should not impede approaches to telephones by people who use wheelchairs.

**1.2 Mounting Height:** The highest operable part of the telephone should be within the ranges specified as follows: the maximum high forward reach allowed should be 48 inches and the maximum high side reach allowed should be 54 inches.

**1.3 Protruding Objects:** Telephones with their leading edges between 27 inches and 80 inches above the finished floor should protrude no more than 4 inches into walks, halls, corridors, passageways, or aisles.

**1.4 Hearing Aid Compatible and Volume Control Telephones:** Telephones should be hearing aid compatible. Volume controls, capable of a minimum of 12 dbA and a maximum of 18 dbA above normal should be provided.

**1.5 Controls:** Telephones should have push button controls where service for such equipment is available.

**1.6 Telephone Books:** Telephone books if provided should be located in a position that complies with the following: the maximum high forward reach allowed should be 48 inches and the maximum high side reach allowed should be 54 inches.

**1.7 Cord Length:** The cord from the telephone to the handset should be at least 29 inches long.

**1.8 Text Telephone Required:** Text telephones used with a pay telephone should be permanently affixed within, or adjacent to the telephone enclosure. If an acoustic coupler is used, the telephone cord should be sufficiently long to allow connection of the text telephone and the telephone receiver.

Pay telephones designed to accommodate a portable text telephone should be equipped with a shelf and an electrical outlet within or adjacent to the telephone enclosure. The telephone handset should be capable of being placed flush on the surface of the shelf. The shelf should be capable of accommodating a text telephone and should have 6 inches minimum vertical clearance in the area where the text telephone is to be placed.

**Statement of Existing Conditions:** Many of the interior telephones are not accessible due to inadequate clearance, high controls, the lack of amplification devices, and the lack of TDD's (Telecommunication Devices for the Deaf) for the severely hearing impaired.

**Goal for Compliance:** An appropriate number of the interior public telephones should be made accessible. *A minimum of one accessible public phone, campus phone and all of the emergency phones should be provided in each essential building, as a Priority 2 compliance issue. The Access Committee also determined that at least one TDD should be installed in the library, student union building and the Office of Disabled Student Services, as a Priority 3, compliance issue (the actual location of the TDD's should be determined by the campus with input from the office of Disabled Student Services).*

## **H. LIFE SAFETY (ADAAG Section 4.28)**

### **ADA Regulations:**

#### **1. ALARMS**

At a minimum, visual signal appliances should be provided in buildings and facilities in each of the following areas: restrooms and any other general usage areas (e.g. meeting rooms), hallways, lobbies, and any other area for common use. Visual alarm signals should be integrated into the building or facility alarm system. If an existing building

does not have an existing alarm system, then modifications to install visual alarms are not required. The appliance should be placed 80 inches above the highest floor level within the space or 6 inches below the ceiling whichever is lower. In general, no place in any room or space required to have a visual signal appliance should be more than 50 feet from the signal. In large rooms and spaces exceeding 100 feet across, without obstructions 6 feet above the finished floor, such as auditoriums, devices may be placed around the perimeter, spaces a maximum 100 feet apart, in lieu of suspending appliances from the signal. Units and sleeping accommodations should have a visual alarm connected to the building emergency alarm system or should have a standard 110-volt electrical receptacle into which such an alarm can be connected and a means by which a signal from the building emergency alarm system can trigger such an auxiliary alarm. When visual alarms are in place the signal should be visible in all areas of the unit or room.

**Statement of Existing Conditions:** Visual fire alarm devices are provided in the new buildings on campus. In older facilities often only audible alarm systems are provided.

**Goal for Compliance:** Install visual alarm devices in all essential campus buildings where an existing audible alarm system is provided. Such systems should be installed as a Priority 2 compliance issue.

## **2. AREAS OF RESCUE ASSISTANCE (ADAAG Section 4.3.11)**

A rescue assistance area is an area which has direct access to an exit and where people who are unable to use stairs may remain temporarily in safety to await further instructions or assistance during an emergency evacuation of a building.

### **ADA Regulations:**

**2.1. Location and Construction:** An area of rescue assistance should be one of the following:

- (1) A portion of a stairway landing within a smokeproof enclosure (complying with local requirements).
- (2) A portion of an exterior exit balcony located immediately adjacent to an exit stairway when the balcony complies with local requirements for exterior exit balconies. Openings to the interior of the building located within 20 feet of the

area of rescue assistance should be protected with fire assemblies having a three-fourths hour fire protection rating.

- (3) A portion of a one-hour-fire-resistive corridor located immediately adjacent to an exit enclosure.
- (4) A vestibule located immediately adjacent to an exit enclosure and constructed to the same fire-resistive standards as required for corridors and openings.
- (5) A portion of a stairway landing within an exit enclosure which is vented to the exterior and is separated from the interior of the building with no less than one-hour fire-resistive doors.
- (6) When approved by the appropriate local authority, an area or a room which is separated from other portions of the building by a smoke barrier. The area of room should be provided with an exit directly to an exit enclosure.
- (7) An elevator lobby when elevator shafts and adjacent lobbies are pressurized as required for smokeproof enclosures by local regulations and when complying with requirements herein for size, communication and signage.

**2.2 Size:** An area of rescue assistance should provide at least two accessible areas each being not less than 30 inches by 48 inches. The area of rescue assistance should not encroach on any required exit width. The total number of such 30 inch by 48 inch areas per story should not be less than one for every 200 persons of calculated occupant load served by the area of rescue assistance.

**2.3 Stairway Width:** Each stairway adjacent to an area of rescue assistance should have a minimum clear width of 48 inches between handrails.

**2.4 Two Way Communication System:** A method of two-way communication, with both visible and audible signals, should be provided between each area of rescue assistance and the primary entry.

**2.5. Identification:** Each area of rescue assistance should be identified with a sign which states "AREA OF RESCUE ASSISTANCE" and displays the International Symbol of Accessibility. The sign should be illuminated when exit sign illumination is required. Signage should also be installed at all inaccessible exits and where otherwise necessary to clearly indicate the direction to areas of rescue assistance. In each area of rescue assistance, instruction on the use of the area under emergency conditions should be posted adjoining the two-way communication system.

**Statement of Existing Conditions:** No areas of rescue assistance have been provided on campus. Rescue assistance areas are not required in buildings equipped with an automatic fire sprinkler system. Rescue assistance areas are also not required on floor levels which have at least two accessible exits at grade level or to adjoining buildings.

**Goal for Compliance:** Add an automatic sprinkler system or at least 2 areas of rescue assistance areas per floor above grade level in all essential campus buildings. This work should be undertaken as a Priority 2 compliance issue.

### **3. PROTRUDING OBJECTS (ADAAG Section 4.4)**

#### **ADA Regulations:**

**1.1.1 General:** Objects projecting from wall (for example telephones) with their leading edges between 27 inches and 80 inches above the finished floor should protrude no more than 4 inches into walks, hall, corridors, passageways, or aisles. Objects mounted with their leading edges at or below 27 inches above the finished floor may protrude any amount. Free-standing objects mounted on posts or pylons may overhang 12 inches maximum from 27 inches to 80 inches above the ground or finished floor. Protruding objects should not reduce the clear width of an accessible route or maneuvering space.

**1.1.2 Head Room:** Walks, halls, corridors, passageways, aisles or other circulation spaces should have 80 inches minimum clear head room. If vertical clearance of an area adjoining an accessible route is reduced to less than 80 inches, a barrier to warn blind or visually-impaired persons should be provided.

**Statement of Existing Conditions:** There were no serious hazards surveyed on the campus. In some instances, service counters project into hallways, making them protruding objects

A concern voiced at the ADA forum and in questionnaires is that during construction time on many campuses, accessible walkways are often blocked by construction materials, trash bins, etc., forcing students in wheelchair to make unnecessary and often lengthy detours.

**Goal for Compliance:** Service counters projecting into hallways should be adjusted to have their leading edge below 27 inches. Construction zones should be fenced and an accessible alternate path of travel should be provided in the immediate surroundings of the construction site.

## **I. DRINKING FOUNTAINS (ADAAG Section 4.15)**

### **ADA Regulations:**

**1.1 Spout Height:** Spout should not be higher than 36 inches measured from the floor or ground surfaces to the spout outlet.

**1.2 Spout location:** The spouts of the drinking fountains should be at the front of the unit and the water flow should be parallel to the front of the unit. The spout should provide a flow of water at least 4 inches high so as to allow the insertion of a cup or glass under the flow of water. The spout must be positioned so the flow of water is within 3 inches of the front edge of the fountain.

**1.3 Controls:** Controls should be operable with one hand and should not require tight grasping, pinching or twisting of the wrist. Controls must not require more than 5 pounds of force to operate.

### **1.4 Clearances**

**1.4.1** Wall and post-mounted cantilevered units should have a clear knee space between the bottom of the apron and the floor or ground at least 27 inches, 30 inches wide and 17 to 19 inches deep. Such units should also have a minimum clear floor space 30 by 48 inches to allow a person in a wheelchair to approach the unit facing forward.

**1.4.2** Free-standing or built-in units not having a clear space under them should have a clear floor space at least 30 by 48 inches that allows a person in a wheelchair to make a parallel approach to the unit.

**Statement of Existing Conditions:** The most common violations found at drinking fountains is the lack of knee clearance, the lack of a control that does not require a tight grasp to operate, and the spout being too high for a person in a wheelchair.

**Goal for Compliance:** A minimum of one accessible drinking fountain should be provided in each essential campus building, as a Priority 2 compliance issue. Preferably, the drinking fountain should be located by the accessible toilet rooms. *Additional drinking fountains should be provided as a Priority 4 compliance issue for greater convenience.*

## **J. AUTOMATED TELLER MACHINES (ADAAG Section 4.34)**

**ADA Regulations:** Each ATM machine required to be accessible should be on an accessible route and should comply with the following:

- A clear floor space that allows a forward or a parallel approach using a wheelchair should be provided
- The highest operable part of controls should be placed at 48 inches for a maximum high forward reach and 54 inches for a maximum high side reach.
- Controls and operating mechanisms should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls should be no greater than 5 pounds of pressure.
- Free standing or built in units not having a clear space under them should have a clear floor space that allows a forward or a parallel approach, and both a forward and side reach to the unit allowing a person in a wheelchair to access the controls and dispensers.
- Instructions and all information for use should be made accessible to and independently usable by persons with vision impairments.

**Statement of Existing Conditions:** The Automated Teller Machines surveyed, do not have instructions for use by the visually impaired, and lack accessible controls.

**Goal for Compliance:** A minimum of one Automated Teller Machine (when provided) should be made accessible, as a Priority 3 compliance issue. Braille or voice instructions should be provided for individuals with visual impairments. All controls should be of an accessible design without requiring tight grasp.

## **K. SPECIAL USE BUILDINGS AND SPACES**

### **1. Libraries: (ADAAG Section 8)**

**ADA Regulations:** The design of all public areas (non-staff) of a library should comply with the following: At least 5% or a minimum of one of each element of fixed seating tables, or study carrels should provide knee clearances of at least 27 inches high, 30 inches wide and 19 inches deep. At least one lane at each check-out area should have a portion of a counter that is at least 36 inches in length with a maximum height of 36 inches above the finish floor. Clear aisle space at card catalogs and magazine displays should be 36 inches minimum. Maximum reach height should be 48 inches if they can only be approached from the front by a person using a wheelchair. If the catalogs can be approached from the side, they may be up to 54 inches high. Minimum clear aisle width between stacks should be 36 inches, and 42 inches preferred where possible.

**Statement of Existing Conditions:** The field survey comment sheets and concerns of disabled students voiced at the ADA Forum indicate that the Robert Kennedy library has aisles at both card catalogs and stacks that are too narrow and that the book shelves are too high to reach. Check out counters are also reportedly too high. In some instances, although adequate stack clearance was provided, oversize books project into the required clearance and obstructs the path of travel. Currently, there is only one accessible computer station on the main floor..

**Goal for Compliance:** Access to library areas is to be provided as a Priority 2 compliance issue. Rearrange the stack layout as required to provide at least a 36 inch minimum clear width. Provide adequate clearance at the catalogs and magazines. Provide an attendant to assist the disabled in instances where lowering shelves or widening aisles is not achievable. Lower a section of the counter at each check out area. Refer to the database analysis contained in Section 8 for specific corrective actions.

### **2. Dormitories: (ADAAG Section 9)**

**ADA Regulations:** In order to provide persons with disabilities a range of options equivalent to those available to other persons served by the facility, sleeping rooms and suites required to be accessible should be dispersed among the various classes of sleeping accommodations available. One accessible sleeping room should be provided for every

25 sleeping rooms. An accessible unit should be on an accessible route and have the following accessible elements and spaces:

- Accessible sleeping rooms should have a 36 inch clear width maneuvering space located along both sides of a bed, except that where two beds are provided, this requirement can be met by providing a 36 inch wide maneuvering space located between the two beds.
- Doors and doorways should allow a minimum clear passage of 32 inches.
- If fixed or built-in storage facilities such as cabinets, shelves, closets and drawers are provided in accessible spaces, at least one of each type should be accessible.
- All controls in accessible units should be made accessible
- At least one full bathroom (i.e., one with a water closet, a lavatory, and a bathtub or shower) should be provided.
- Kitchens, kitchenettes, or wet bars when provided as accessory to a sleeping room should be accessible. Clear floor space for a front or parallel approach to cabinets counters, sinks and appliances should be provided. Countertops and sinks should be mounted at a maximum height of 34 inches above the floor. At least fifty percent of shelf space in cabinets or refrigerators/freezers should be within reaching ranges. Controls and mechanisms should also be accessible.
- Auxiliary visual notification devices should be provided in units, sleeping rooms and suites to alert room occupants of incoming telephone calls and a door knock or bell or of an emergency. Notification should not be connected to auxiliary visual alarm signal appliances. Permanently installed telephones should have volume controls and an accessible electrical outlet within 4 feet of a telephone connection should be provided to facilitate the use of a text telephone.

**Statement of Existing Conditions:** An insufficient number and type of accessible sleeping accommodations have been provided on campus. In general, dormitory rooms and apartments are not accessible due to the campus topography. Most dormitory buildings are accessible via ramps, but the ramp slope exceeds 10 degrees.

**Goal for Compliance:** An appropriate number of accessible sleeping accommodations should be provided as a Priority 2 compliance issue. Provide accessible sleeping rooms in conformance with the table below:

| <u>Number of Rooms</u> | <u>Accessible Rooms</u>      | <u>Rooms with Roll in Showers</u>           |
|------------------------|------------------------------|---|
| 1 to 25                | 1                            |   |
| 26 to 50               | 2                            |   |
| 1 to 75                | 3                            | 1   |
| 76 to 100              | 4                            | 1   |
| 101 to 150             | 5                            | 2   |
| 151 to 200             | 6                            | 2   |
| 201 to 300             | 7                            | 3   |
| 301 to 400             | 8                            | 4   |
| 401 to 500             | 9                            | 4 plus one for each additional 100 over 400 |
| 501 to 1000            | 2% of total                  |   |
| 1001 to over           | 20 plus 1 for each over 1000 |   |

In addition, visual alarms, notification devices, and telephones shall be provided in conformance with the following table:

| <u>Number of Elements</u> | <u>Accessible Elements</u>       |
|---------------------------|----------------------------------|
| 1 to 25                   | 1                                |
| 26 to 50                  | 2                                |
| 51 to 75                  | 3                                |
| 76 to 100                 | 4                                |
| 101 to 150                | 5                                |
| 151 to 200                | 6                                |
| 201 to 300                | 7                                |
| 300 to 400                | 8                                |
| 401 to 500                | 9                                |
| 501 to 1000               | 2% of total                      |
| 1001 and over             | 20 plus 1 for each 100 over 1000 |

### **3. Fixed or Built-in Seating or Tables in Laboratories, Computer Classrooms and other Classrooms: (ADAAG Section 4.32)**

**ADA Regulations:** If fixed or built-in seating or tables (including but not limited to, study carrels and laboratory stations) are provided in accessible public or common use areas, at least five percent (5%), but not less than one, of the fixed or built-in seating areas or tables should comply with the following:

- A minimum clear space measuring 30 inch by 48 inch should be provided to accommodate a single, stationary wheelchair.
- If seating for people in wheelchair is provided at tables or counters, knee spaces at least 27 inches high, 30 inches wide, and 19 inches deep should be provided.

- The tops of accessible tables and counters should be from 28 inches to 34 inches above the finish floor or ground.
- Equipment such as fume hoods and emergency eye wash, and showers were surveyed as a part of the laboratories. Although these two items are not addressed specifically under ADA, general accessibility criteria for reach and height were used to evaluate the accessibility of these elements.

**Statement of Existing Conditions:** Laboratories typically do not provide accessible work stations, sinks, fume hoods, or emergency eyewash/showers. Fixed tables in computer classrooms are often inaccessible.

**Goal for Compliance:** *A minimum of one accessible computer and laboratory workstation should be provided in each computer room or laboratory as a Priority 2 compliance issue. Provide accessible workstations at laboratories by retrofitting existing stations, installing new ones or purchasing new, portable stations that include an accessible sink and counter. A minimum of one accessible fume hood per laboratory should be provided. Existing emergency eye wash/showers should be made accessible. Additional workstations should be made accessible for the convenience of the disabled as a Priority 4 compliance issue.*

**4. Assembly Areas / Auditoriums / Stadiums (ADAAG Section 4.33)**

**ADA Regulations:** In places of assembly with fixed seating accessible wheelchair locations should provide a clear space of 48 inches by 66 inches if it is a forward or rear access or 60 inches by 66 inches if it is a side access. Wheelchair locations should be provided in accordance with the following table:

| <b>Capacity of Seating<br/>in Assembly Areas</b> | <b>Number of Required<br/>Wheelchair Locations</b>                             |
|--|--|
| 4 to 25  | 1  |
| 26 to 50   | 2  |
| 51 to 300  | 4  |
| 301 to 500                                       | 6  |
| over 500   | 6, plus additional space<br>for each total seating<br>capacity increase of 100 |

In addition, one percent, but not less than one, of all fixed seats should be aisle seats with no armrests on the aisle side, or removable or folding armrests on the aisle side. Each

such seat should be identified by a sign or marker. Signage notifying patrons of the availability of such seats should be posted at the ticket office. Fixed seat assembly areas which accommodate 50 persons or more or which have audio-amplification systems, should have a permanent assistive listening system, or an adequate number of electrical outlets or other supplementary wiring necessary to support a portable assistive listening system. The minimum number of receivers to be provided should be equal to 4 percent of the total number of seats, but in no case less than two. Signage should be installed to notify patrons of the availability of an assistive listening system. Access should be provided to the stage or platform area, if one exists.

**Statement of Existing Conditions:** Assembly areas typically lack an adequate number of accessible wheelchair locations and assistive listening systems are virtually never provided or identified as being available. Often, no accessible path of travel is provided from the seating area to the stage or platform level inside the theater. There are currently no wheelchair seating spaces in the stadium.

**Goal for Compliance:** Assembly areas/stadiums should be made accessible as a Priority 2 compliance issue. This includes providing access to the stage or platform, and assistive listening systems.

## **5. Offices:**

**ADA Regulations:** No specific ADA requirements exist for offices. Office doorways are covered under ADAAG, Section 4.13.

**Statement of Existing Conditions:** Most administrative and faculty offices are small in area. Space layout and furniture arrangement in most offices do not allow a person in a wheelchair to maneuver inside the space.

**Goal for Compliance:** *Offices that accommodate disabled staff or faculty should have furniture arranged to be able to maneuver freely inside the office. Doors should be wide enough and clearances should be provided on the pull and push side of the door. If faculty offices are too small or otherwise not accessible, faculty members should arrange to meet disabled students at an alternative accessible location, as permitted under Title II of the ADA.*

## **6. Restaurants and Cafeterias (ADAAG Section 5)**

**ADA Regulations:** Where fixed tables are provided, at least 5 percent, but not less than one, of the fixed tables should be accessible. Where food or drink is served at counters exceeding 34 inches in height for consumption by customers seated on stools or standing at the counter, a portion of the main counter lowered to 28 to 34 in height for 60 inches in length minimum should be provided, or service should be available at accessible tables within the same area. All accessible fixed tables should be accessible by means of an access aisle at least 36 inches clear between parallel edges of tables or between a wall and the table edges. Food service lines should have a minimum clear width of 36 inches, with a preferred clear width of 42 inches to allow passage around a person using a wheelchair. Tray slides should be mounted no higher than 34 inches above the floor. If self-service shelves are provided, at least 50 percent of each type must be accessible. Self-service shelves and dispensing devices for tableware, dishware, condiments, food and beverages should be installed to be between 9 and 54 inches above the floor. In banquet rooms or spaces where a head table or speaker's lectern is located on a raised platform, the platform should be accessible. Open edges of a raised platform should be protected by placement of tables or a curb.

**Statement of Existing Conditions:** The main seating areas of the student union, cafeterias and dormitory cafeterias are generally accessible. However, the service areas had tray slides higher than 34 inches and access aisles less than 36 inches.

**Goal for Compliance:** Modify all cafeterias to be accessible, as a Priority 2 compliance issue. (Refer to the Section 8, Architectural Barrier Removal Inventory for specific issues of non-compliance and recommended corrective action).

## **7. Swimming Pools:**

**ADA Regulations:** The ADA does not specifically address swimming pool access. However, it is the recommendation of the Access Committee to provide a device to assist wheelchair users in entering pools. Students with disabilities who take rehabilitation classes have also requested the installation of a lift at swimming pools.

**Statement of Existing Conditions:** The swimming pools are not equipped with a transfer lift or a ramp to assist the disabled.

**Goal for Compliance:** *Provide a transfer lift at the existing swimming pool as a Priority 2 compliance issue.* *Cost for compliance*      *\$3,000.00.*

## **8. Small Structures and Trailers:**

**ADA Regulations:** Small buildings and trailers which are used to house university program activities are covered by the ADA regulations in the same manner as permanent, larger buildings. However, construction trailers are specifically exempt from the ADA regulations and need not be made accessible.

**Statement of Existing Conditions:** Many small structures and trailers exist on campus and house "program" activities.

**Goal for Compliance:** These structures should be made accessible on a Priority 1 basis, or the program space should be relocated to alternative accessible facilities.

## **9. Physical Plant and Mechanical Spaces: (ADAAG Section 4.1.1(5))**

**ADA Regulations:** Physical plant, storage and mechanical spaces are "non-essential" spaces and do not need to be made accessible unless it is for a job accommodation, for a specific disabled employee. Spaces frequented by service personnel for repair purposes, need not be accessible.

**Statement of Existing Conditions:** The physical plant buildings have been surveyed. Mechanical rooms within buildings were not surveyed.

**Goal for Compliance:** The physical plant facilities should be made accessible on a Priority 3 basis, or to accommodate a disabled employee.

## **10. Laundry Room Appliances and Kitchen Appliances**

**ADA Regulations:** The ADA does not address the issue of appliances in kitchens or laundry rooms. There is however a code compliance range for controls and mechanisms.

This range for reach and height should apply to refrigerators, cooktops, ovens, washers and dryers.

Controls and operating mechanisms should comply with the following:

- A clear floor space required to accommodate a single, stationary wheelchair and occupant of 30 by 48 inches that allows a forward or a parallel approach should be provided at controls, dispensers, receptacles, and other operable equipment. If the clear floor space only allows forward approach to an object, the maximum high forward reach allowed should be 48 inches. The minimum low forward reach is 15 inches.
- The highest operable part of controls, dispensers, receptacles, and other operable equipment should be placed at 48 inches maximum and 15 inches minimum. If the clear floor space only allows forward approach and 54 inches maximum and 9 inches minimum if it is a side reach.
- Controls and operating mechanisms should be operable with one hand, and should not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls should be no greater than 5 pounds of pressure.

Sinks should comply with the following:

- Lavatories should be mounted with the rim or counter surface no higher than 34 inches above the finish floor. Clearance of at least 29 inches above the finish floor to the bottom of the apron should be provided.
- A clear floor space 30 by 48 inches should be provided in front of the lavatory to allow front approach. Such clear floor space should adjoin or overlap an accessible route and should extend a maximum of 19 inches underneath the lavatory.
- Hot water and drain pipes under lavatories should be insulated or otherwise configured to protect against contact. There should not be any abrasive surfaces under lavatories.
- Controls and operating mechanisms should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls should be no greater than 5 lbf (pound/force). Lever-operated, push-type and electronically controlled mechanisms are examples of acceptable designs. If self-closing valves are used the faucet should remain open for at least 10 seconds.

**Statement of Existing Conditions:** Laundry rooms and kitchens have been surveyed in dormitories or where provided. In most cases kitchen and laundry appliances have controls in the rear and are hard to reach.

**Goal for Compliance:** *Install in at least one laundry room and kitchen, appliances that are accessible. Such systems should be installed as a Priority 3 compliance issue.*

## **11. Changing Areas (ADAAG Section 4.35)**

**ADA Regulations:** Changing areas should comply with the following:

- A clear floor space allowing a person using a wheelchair to make a 180 degree turn should be provided in each accessible dressing room entered through a swinging or sliding door. No door should swing into any part of the turning space.
- Every accessible dressing room should have a bench fixed to the wall along the larger dimension. The bench should be mounted 17 to 19 inches above the finish floor. Clear floor space should be provided alongside the bench to make a parallel transfer onto the bench.
- Where mirrors are provided in dressing rooms of the same use, then in an accessible dressing room, a full length mirror measuring at least 18 inch wide by 54 inches high should be mounted in a position affording a view to a person on the bench as well as to a person in a standing position.

**Statement of Existing Conditions:** Changing and dressing rooms are found in locker rooms and in X-ray areas at the Student Health Center. These dressing rooms have insufficient turning clearance .

**Goal for Compliance:** Provide at least one accessible dressing/fitting room where provided.

## **12. Areas Used by Employees as Work Areas (ADAAG Section 4.1.1 (3))**

**ADA Regulations:** Areas that are used only as work areas should be designed and constructed so that individuals with disabilities can approach, enter, and exit the areas. These guidelines do not require that any areas used only as work areas be constructed to permit maneuvering within the work area or be constructed or equipped (i.e., with racks or shelves) to be accessible.

**Statement of Existing Conditions:** Employee work areas were typically surveyed. Fixed items were surveyed, but not equipment.

**Goal for Compliance:** Employee work areas should be made accessible as part of a job accommodation for a disabled employee.

### **13. Temporary Structures: (ADAAG Section 4.1.1 (4))**

**ADA Regulations:** Temporary structures are required to comply with the ADA requirements, if they contain university "program" space.

**Statement of Existing Conditions:** Many of the temporary structures have been on campus for many years and provide program spaces such as classrooms and faculty offices.

**Goal for Compliance:** No distinction is made in our priority ranking for permanent versus temporary structures (although the database does identify buildings accordingly). All temporary structures which "house" program space should be made accessible on a Priority 1 basis.

### **L. ELECTRICAL SYSTEMS (LIGHTS, THERMOSTATS, OUTLETS) (ADAAG Section 4.27)**

**ADA Regulations:** Controls and operating mechanisms should comply with the following:

- A clear floor space required to accommodate a single, stationary wheelchair and occupant of 30 by 48 inches that allows a forward or a parallel approach should be provided at controls, dispensers, receptacles, and other operable equipment. If the clear floor space only allows forward approach to an object, the maximum high forward reach allowed should be 48 inches. The minimum low forward reach is 15 inches.
- The highest operable part of controls, dispensers, receptacles, and other operable equipment should be placed at 48 inches maximum and 15 inches minimum.

Electrical and communication system receptacles on walls should be mounted no less than 15 inches above the floor.

- Controls and operating mechanisms should be operable with one hand, and should not require tight grasping, pinching, or twisting of the wrist. The force required to activate controls should be no greater than 5 pounds of pressure.

**Statement of Existing Conditions:** Wall outlet height, electrical switches and thermostat height were measured in each building surveyed. Wall outlets were usually mounted between 12 and 15 inches. The height of electrical switches varies between 48 and 54 inches depending on the location. Thermostats were typically mounted at the same height as electrical switches.

**Goal for Compliance:** *Such systems should be modified to comply with the regulations as a low priority (Priority 4). Such issues of non-compliance do not deny access to the universities program, but are an issue of convenience. The goal for compliance is to provide one accessible light switch, two accessible wall outlets and one accessible thermostat (where provided) per room. This work could also be undertaken as a job accommodation for a specific disabled staff or faculty member.*

#### **M. TURNSTILES (ADAAG Section 4.1.3.2)**

**ADA Regulations:** Turnstiles should not be the only means of passage at an accessible entrance or along an accessible route. An accessible gate or door should be provided adjacent to the turnstile and should be designed as to facilitate the same use pattern.

**Statement of Existing Conditions:** Turnstiles often exist in the library and the university bookstore. Alternative means of access are sometimes provided.

**Goal for Compliance:** Provide another accessible path of travel where a turnstile is installed.

#### **N. CLOSETS: (ADAAG Section 4.25)**

**ADA Regulations:** A clear floor space at least 30 by 48 inches that allows either a forward or parallel approach by a person using a wheelchair should be provided at

accessible storage facilities. Accessible storage spaces should be comply with the following:

- If the clear floor space only allows forward approach, the maximum high forward reach allowed should be 48 inches. The minimum low forward reach is 15 inches.
- If the clear floor space only allows parallel approach by a person in a wheelchair, the maximum high side reach allowed should be 54 inches and the low side reach should be no less than 9 inches above the floor.
- Clothes rods or shelves should be a maximum of 54 inches above the finish floor for a side approach. Where the distance from the wheelchair to the clothes rod or shelf exceeds 10 inches (as in closets without accessible doors), the height to the rod or shelf should be between 9 and 48 inches and the depth to the rod or shelf should be no more than 21 inches.
- Hardware for accessible storage facilities should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist. Touch latches and U-shaped pulls are acceptable.

**Statement of Existing Conditions:** Closets were surveyed in offices and in dormitory rooms. Closets vary in depth and in height.

**Goal for Compliance:** Accessible closets should be provided in accessible dormitory rooms.

#### **O. PLATFORM LIFTS (ADAAG Section 4.11)**

**ADA Regulations:** Platform lifts (wheelchair lifts) complying with applicable state or local codes may be used in lieu of an elevator only under the following conditions:

- To provide an accessible route to a performing area in an assembly occupancy.
- To comply with the wheelchair viewing position line-of-sight and dispersion comparable to those for members of the general public.
- To provide access to incidental occupiable spaces and rooms which are not open to the general public and which house no more than five persons, including but not limited to equipment control rooms and projection booths.
- To provide access where existing site constraints or other constraints make use of a ramp or an elevator infeasible.
- If platform lifts are used, they should facilitate unassisted entry, operation and exit from the lift.

- Platform lifts are not permitted in new construction.

**Statement of Existing Conditions:** Platform lifts are installed in some instances where access is needed such as a theater stage or in a hallway that serves different floor sub-levels.

**Goal for Compliance:** Provide a platform lift where the installation of an elevator or a ramp is not feasible to provide an accessible path of travel.

#### **P. MAILBOXES AND LOCKERS:**

**ADA Regulations:** The access to mailboxes and lockers is not addressed specifically by ADA. However, controls and operating mechanisms to mailboxes and lockers need to be accessible and should comply with the following:

- If the clear floor space only allows forward approach, the maximum high forward reach allowed should be 48 inches. The minimum low forward reach is 15 inches.
- If the clear floor space only allows parallel approach by a person in a wheelchair, the maximum high side reach allowed should be 54 inches and the low side reach should be no less than 9 inches above the floor.
- Hardware for lockers and mailboxes should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist.

**Statement of Existing Conditions:** Mailboxes and lockers have been surveyed for compliance with ADA controls and operating mechanisms section. In most cases lockers are accessible if there is a clear access aisle between benches and the lockers. The operating mechanism is usually not operable with one hand. Mailboxes are usually located at a lower level but are sometimes unlocked by key which requires a tight grasp and twist.

**Goal for Compliance:** Accessible mailboxes and lockers should be provided as a Priority 4 compliance issue. *At least 2 percent of the total number of mailboxes and lockers should be made accessible.*

#### **Q. CARPETING: (ADAAG Section 4.5.3)**

**ADA Regulations:** If carpet or carpet tile is used on a ground or floor surface, then it should be securely attached; have a firm cushion, pad, or backing, or no cushion or pad; and have a level loop, textured loop, level cut pile, or level cut/uncut pile texture. The maximum pile thickness should be 1/2 inch. Exposed edges of carpet should be fastened to floor surfaces and have trim along the entire length of the exposed edge.

**Statement of Existing Conditions:** Carpet condition was surveyed in areas where it presented a tripping hazard.

**Goal for Compliance:** Secure carpeting in areas where loose.

## **R. WINDOWS**

**ADA Regulations:** Under ADA, the window section is reserved and there are no requirements. It is however the recommendation of the Access Committee to treat controls and mechanisms at windows in a similar manner as a fixture or equipment. This is particularly important in dormitories where individuals with disabilities may need to operate windows and window treatments. In this case, the following should be a requirement at windows:

- If the clear floor space only allows forward approach, the maximum high forward reach allowed should be 48 inches. The minimum low forward reach is 15 inches.
- If the clear floor space only allows parallel approach by a person in a wheelchair, the maximum high side reach allowed should be 54 inches and the low side reach should be no less than 9 inches above the floor.
- Hardware for windows should be operable with one hand and should not require tight grasping, pinching, or twisting of the wrist.

**Statement of Existing Conditions:** Existing controls at windows are often not operable without tight grasping or twist.

**Goal for Compliance:** *Modify the window controls to be accessible in dorm rooms intended for use by the disabled. On an as needed basis, modify the windows in the offices of a disabled faculty or staff members.*

## **S. BATHTUBS AND SHOWER STALLS (ADAAG Sections 4.20 and 4.21)**

**ADA Regulations:** Bathtubs should comply with the following:

- A clear floor space of 30 or 48 by 60 inches minimum should be provided in front of the bathtub. if there is a seat in the tub.
- A clear floor space of 30 by 75 inches minimum should be provided in front of the bathtub if there is a seat at the head of the tub.
- An in-tub seat or a seat at the head end of the tub should be provided. Seats should be mounted securely and should not slip during use.
- Grab bars should be provided.
- Faucets and other controls should be located no higher than 36 inches above the floor.
- A shower spray unit with a hose at least 60 inches long that can be used both as a fixed shower head and as a hand-held shower should be provided.
- If provided, enclosures for bathtubs should not obstruct controls or transfer from wheelchairs onto bathtub seats or into tubs. Enclosures on bathtubs should not have tracks mounted on their rims.

**ADA Regulations:** Shower stalls should comply with the following:

- Shower stall size should be 36 by 36 inches with a clear floor space area of 36 by 48 inches or 30 by 60 inches with a clear floor space area of 36 by 60 inches.
- A seat should be provided in shower stalls 36 by 36 inches. The seat should be mounted 17 to 19 inches from the bathroom floor and should extend the full length of the stall. In a 36 by 36 inch shower stall. The seat should be on the wall opposite the controls. Where a fixed seat is provided in a 30 by 30 inch shower stall, it should be folding type and should be mounted on the wall adjacent to the controls.
- Grab bars should be provided at the shower stall.
- Faucets and controls should be mounted no higher than 48 inches.
- A shower spray unit with a hose at least 60 inches long that can be used both as a fixed shower head and as a hand held shower should be provided.
- If provided, curbs in shower stalls 36 by 36 inches should be no higher than 1/2 inch. Shower stalls that are 30 by 60 inches minimum should not have curbs.
- If provided, enclosures for shower stalls should not obstruct controls or obstruct transfer from wheelchairs onto shower seats.

**Statement of Existing Conditions:** Few showers and bathtubs are accessible in the dormitories, or in the Physical Education building..

**Goal for Compliance:** Provide accessible showers/bathrooms in conjunction with the provision of accessible dormitory rooms and locker rooms as a Priority 2 compliance issue.

**SECTION 7**

***BUDGET COSTING OF BARRIER REMOVAL***

## **SECTION 7**

### ***BUDGET COSTING OF ARCHITECTURAL BARRIER REMOVAL***

The extensive listing of architectural barriers contained in the inventory in Section 8 was developed by computer analysis. The field survey data was compared to a compliance table comprised of the ADA (ADAAG), Title III, Accessibility Guidelines. According to the Title II Regulations a public entity may use either the ADAAG Guidelines or the requirements of the Uniform Federal Accessibility (UFAS), without the elevator exception to assess access compliance. In addition, since all of the CSU facilities are located in the state of California, when any corrective work is to be undertaken, the corrective work should be designed to meet the requirements of Title 24, Part 2, the State Building Code. Title 24 is currently being revised to comply with the ADA regulation. The Department of Justice will "certify" the state code as being acceptable to utilize in lieu of the ADA if it is as stringent or more stringent than the ADA. Once Title 24 is revised, a new compliance table will be developed utilizing this criteria. In addition, a fourth compliance table will be developed which incorporates the most restrictive criteria for ADAAG, UFAS, and Title 24 (revised). It will be possible for the campuses to run compliance checks against any of these compliance tables in the future.

The CSU Access Committee specified the use of the ADAAG criteria, as the appropriate table to check for compliance at this time, since it is currently the most comprehensive and restrictive (with only a few exceptions).

When the field survey data is compared to the ADAAG compliance tables all issues of non-compliance are identified at the element level.<sup>1</sup> Fifty distinct element types are contained in the data base. An average campus building may contain 1,000 or more surveyed elements which effect access. It was therefore logical for us to prepare our budget cost for barrier removal on a cost per element. Elements could later be linked together to provide cost data at the space level, such as a toilet room, classroom, or

---

<sup>1</sup> The data base management system is organized on the basis of types of spaces and elements within spaces. Elements are the building blocks of access compliance, i.e., manual doors, elevators, stairs, ramps, sinks, etc.

laboratory; or at a building level; or at the campus level; or ultimately at the system-wide level.

Corrective Action Codes were written for each of the fifty element types. Descriptions of the recommended corrective work were written for each non-compliant response to a "rule" in the compliance table. As an example, refer to the following Corrective Action Code, Element #27 Sink/Lavatory, line #10 reads, "Install blade-type handles, or install a new single lever faucet." Cost \$150.00. This corrective action relates to Question number 20 in the data base. Is a "tight grasp/twist needed for faucet". A Yes response would violate the compliance table and Rule 1.0 and trigger this corrective action. The "Go to Line" column avoids other repetitive corrective actions. Since the faucet hardware has already been replaced as a corrective action required by line 10, we do not want or need to replace or add the cost to replace the faucet hardware a second time.

As an additional cost control, we have established maximum cost limits for "worse-case" scenarios for each element (where possible). Therefore, to remove and replace a non-conforming sink, cabinet, soap dispenser, mirror, towel dispenser, and visual alarm a maximum cost limit was established at \$1,600.00, even if the line by line summary exceeded this value. The logic applied here is that many of the non-compliance issues are redundant and not truly additive.

Budget cost dollars were established for typical field conditions. Depending on the actual field conditions the cost for barrier removal may be higher or lower on a case by case basis. Our budget numbers represent a median price, and therefore are valuable as relative budget dollars, on a campus wide or system wide basis. The larger corrective action items may require detailed construction cost estimates once construction documents have been prepared. Obviously, the scope and time frame of this project did not permit detailed construction cost estimating of each issue of non-compliance.

The budget cost estimates were derived from obtaining cost figures from equipment or specialty vendors; such as manufactures of elevator equipment, platform lifts and assistive listening devices. Other cost estimates were priced based on our experience in undertaking similar corrective action as required by Title III of the ADA and Section 504 of the Rehabilitation Act. The budget cost numbers are conservative taking into consideration the higher bid costs often associated with institutional clients, and taking

into account scheduling the corrective work in a manner to allow the campus to continue in operation.

The budget dollars assume the work would be undertaken by private contractors at prevailing rates. However, much of the corrective work could be performed by the campus Physical Plant Staff as minor projects or maintenance items. This would reduce the cost of construction considerably.

Examples of the Corrective Action Codes are enclosed for review. The corresponding computer "rule sets" are also included. The rule sets are based on the compliance tables contained in the Appendix, item G.

# CORRECTIVE ACTION CODE

**ELEMENT:** 4

**TITLE:** CHANGING AREA

**BUILDING:** MASTER PRICE LIST

**CAMPUS:** \_\_\_\_\_

**IMPLEMENTATION PRIORITY:** 3

| LINE NO. | LINE NO. | QUES. NO. | RULE NO. | GO TO LINE | DESCRIPTION OF CORRECTIVE WORK                                     | COST    |
|----------|----------|-----------|----------|------------|--|---------|
| 10       | 10       | 30        | 1.0      |            | Replace door and frame.  | \$575   |
| 20       | 20       | 50        | 2.0      |            | Provide 60" clear at pull side of door.                            | \$500   |
| 30       | 30       | 60        | 3.0      |            | Create 18" clearance at strike side of door and reverse door swing | \$500   |
| 40       | 40       | 70        | 4.0      |            | Replace hardware to not require tight grasp/twist (install lever). | \$135   |
| 50       | 50       | 90        | 5.0      |            | Provide bench at changing area.                                    | \$200   |
| 60       | 60       | 32        | 6.13     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 70       | 70       | 32        | 6.14     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 80       | 80       | 32        | 6.15     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 90       | 90       | 32        | 6.16     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 100      | 100      | 32        | 6.17     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 110      | 110      | 32        | 6.18     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 120      | 120      | 32        | 6.19     | 999        | Provide adequate width inside largest cubicle.                     | \$1,000 |
| 130      | 130      | 34        | 6.21     | 999        | Provide adequate depth inside largest cubicle.                     | \$1,000 |
| 140      | 140      | 34        | 6.22     | 999        | Provide adequate depth inside largest cubicle.                     | \$1,000 |
| 150      | 150      | 34        | 6.23     | 999        | Provide adequate depth inside largest cubicle.                     | \$1,000 |
| 160      | 160      | 34        | 6.24     | 999        | Provide adequate depth inside largest cubicle.                     | \$1,000 |
| 170      | 170      | 34        | 6.25     | 999        | Provide adequate depth inside largest cubicle.                     | \$1,000 |
| 180      |          |           |          |            |  |         |
| 190      |          |           |          |            |  |         |
| 200      |          |           |          |            |  |         |
| 210      |          |           |          |            |  |         |
| 220      |          |           |          |            |  |         |
| 230      |          |           |          |            |  |         |
| 240      |          |           |          |            |  |         |
| 250      |          |           |          |            |  |         |
| 260      |          |           |          |            |  |         |
| 270      |          |           |          |            |  |         |

**SECTION 8**

***ARCHITECTURAL BARRIER REMOVAL  
INVENTORY***

## **SECTION 8**

### ***ARCHITECTURAL BARRIER REMOVAL INVENTORY***

This listing of items contained in the Architectural Barrier Removal Inventory represent three summary reports of the data. The database contains much more detailed levels of data which can be reported. For example, the deviation by which an issue of non-compliance "failed" a rule can be reported. The recommended corrective action for each issue of non-compliance can also be reported. Custom programs will be provided to assist the future "users" in accessing the database to develop other reports. The detailed site and building reports do list every item of "non-compliance" contained in the database. The complete database management system will be delivered to the CSU and installed on the CSU mainframe system. The ADA database will be integrated with the CSU "SAM" - "Minor Capital Outlay Projects" program.

## **SECTION 9**

### ***APPENDIX***

#### **CONTENTS:**

- A. Description of the Capabilities of the Database Management System**
- B. Campus Building List**
- C. Access Coded Campus Plan**
- D. Campus New Construction Plan Reviews**
- E. Door Pressure Analysis**
- F. Photos**
- G. Compliance Tables**
- H. Listing of Campus Buildings and the Number of Accessible Entrances**

## **APPENDIX A**

### ***DESCRIPTION OF THE CAPABILITIES OF THE DATABASE MANAGEMENT SYSTEM***

# DESCRIPTION OF THE CAPABILITIES OF THE DATABASE MANAGEMENT SYSTEM

## *A. OVERVIEW*

The database for this project consists of some 20 data files which may be divided into the following categories:

- Survey checklist information and questions
- Data collected at the campuses
- Data converted and merged from the data collected at the campuses
- Compliance and corrective action rule sets
- Compliance and corrective action results

This report will concentrate on the data once it has merged from the campus-based files. A brief description on each of the data files will be made along with a discussion of the programs which test and report for compliance and corrective actions. A listing of all major data files are listed at the end of this section.

Currently, the database and programs are MS-DOS based. This is due to the campus data collection instruments (the Poqet computers) being MS-DOS based. All data collection programs and conversion programs were written with the same language (Powerflex). It has recently been decided that compliance and corrective action programs, as well as programs to maintain the database will be written in Oracle as to allow access from both the Macintosh and IBM PC platforms. The data files, though currently in Powerflex format, may be readily converted to other database formats.

## *B. SURVEY CHECKLIST*

The survey checklist section of the database consists of the survey questions and support files necessary to collect data at the campus level. These files are again used during the corrective action phase of the analysis as label, or look up files, for the reports. Programs were written to enter information and to maintain each of these files.

- BACAMPUS - A listing of all campus codes and campus names.

- **BASPACE** - A listing of all space codes used to identify specific types of spaces on the campuses (for example: office, sleeping rooms, laboratories, and assembly/classrooms).
- **BAELEM** - A listing of all types of elements on the campuses. Elements are the basic level of analysis in the database (for example: doors, water fountains, lockers, alarms, and toilets).
- **BAQUES** - A listing of all questions used in the survey. The data file contained the actual question, possible branching options depending on the surveyor's code, and range checking to limit values while in the field.
- **BASPCEL** - A listing of elements contained in specific spaces. This file was used by the survey instrument to list within selected spaces only those elements most likely to exist in the spaces. This expedited the viewing and selection of elements to be surveyed by the teams.

### ***C. DATA COLLECTED AT THE CAMPUS***

Two data file stored information collected by surveyors at the campuses. A third file acted as a system file, updating the record counter, allowing each record to be unique among the various survey instruments in the field. One program allowed the surveyors to enter information at the campuses. Based on the spaces and elements selected, it displayed specific questions and allowed responses to be entered. Due to the limitations on storage on the Poqet computers, the primary data file did not contain descriptive information. This was stored in a second data file. This descriptive information was necessary to better describe a location or to give a coded description (such as E100 for entry door) where no room or space number was available.

- **BACHKLST** - The primary data collection file for all responses to the survey program. Additional information was stored in this file to allow for cross checking against the building.
- **BASPODE** - The secondary data collection file used to store descriptions and labels.

- **BAMASTER** - A system file used to increment the record counter in the above two files.

#### ***D. DATA CONVERTED AND MERGED FROM THE DATA COLLECTED AT THE CAMPUSES***

Data collected by each surveyor at a single campus was stored in separate data directories on a central computer at each campus. To merge the data, a program (BAEXP2) matched up the data from the two data files (BACHKLST & BASPCODE) and separated the data into five data files. The choice of these file files was to normalize the data and allow it to be stored in the least redundant and flexible manner. An additional system file was used to guarantee that all records were uniquely identified while merging the various campus data bases. In addition, some spaces (such as dormitory rooms) were duplicated, rather than individually surveyed. This program expanded these duplicated spaces.

- **CSBUILD** - The storage of all building codes and related information. This file was updated to include campus information received from CSU (for example, funding source and permanent status codes).

This data file initially contained redundant buildings due to the instances where more than one Poqet computer or more than one session was required to collect all the information from a single building. This data was manually merged (and codes changed at the space file level (CSSPACE, see below) to consolidate multiple data sets from a single building).

- **CSSPACE** - The storage of all spaces within each building or site. Each space has a unique ID (since we could not rely on unique room or space codes). This file is updated during the compliance phase (see below) as to whether the space complies or not with the rules being evaluated.
- **CSELEM** - The storage of all elements within each space. Each element has a unique ID (since the surveyor could not be required to uniquely label each element). This file is updated during the compliance and corrective action phases

(see below) as to whether the element complies, its priority level, and the costs associated with repairing the element.

- CSDATA - The storage of the survey responses for each element. Each measurement is uniquely linked to both the unique space and element ID fields. In the case of a numeric response the measurement has been converted to a decimal value (for example, 5-1/2" has been stored as 5.50).
- CSSPCFLR - The storage of which spaces are on which floors. Since some spaces (such as a large assembly hall) may exist on more than one floor, the floor level information could not be directly stored in the CSSPACE (space) data file.
- CSSYS - A system file used to assign the unique ID codes used in the CSSPACE and CSELEM data file.

### ***E. COMPLIANCE AND CORRECTIVE ACTION RULE SETS***

Three data files were created to store the compliance and corrective action rules sets. In the case of the compliance, each survey question was evaluated as to the proper response or range to meet compliance under ADAAG. In addition, a number of issues necessitated the creation of a logic table which involved the testing of responses from several questions within a single element. A coding scheme was developed to handle both these instances (single questions and logic table). In a rare number of cases, formulas had to be entered into the compliance logic tables to derive the proper compliance value. A second data file was created to store these formulas.

A third file was created to store the corrective action code tables. These tables matched up the non-compliance of elements against specific rules and costs.

- CSRULES - The data file containing the survey question compliance tests based on ADAAG.
- CSCALC - The data file containing any in-line formulas necessary for CSRULES (above).

- CSCAC - The data file containing the corrective action codes for selected elements and their respective costs.

## ***F. COMPLIANCE AND CORRECTIVE ACTION RESULTS***

A program (BACOMP) was developed to scan through the entire data set and establish compliance or non-compliance for every element in the database. In addition, this program stores which rules are being tested against each element and the status of those rules. This information is stored in a separate file (CSCOMP, see below), since there may be multiple tests against any response on any question.

A second program (CSUPDATE) is run after CSCOMP to update the compliance status of each element (CSELEM) to its respective space as well as setting the proper priority level from (BAELEM) for each element. This intermediate step was created as a means to set priority levels will probably be incorporated into CSCOMP in a subsequent version.

A third program is (CSCAC) takes the information stored in the current data files and tests them against the corrective action codes (CSCAC). Costs are added to the element (CSELEM) and space (CSSPACE) files.

A fourth program is run (CSPRIOR) to calculate corrective action costs in instances not handled by CSCAC. The basic structure of the database is to evaluate compliance at the element level. Where corrective action must be evaluated at the space or campus level (such as with drinking fountains, ramps, toilet rooms), simple tests are not sufficient. This program is a set of routines which aggregate the data differently than CSCAC and evaluate specific elements at this "higher analysis" level.

All reporting on non-compliance costs is performed at this point. A flat file is created from the CSBUILD, CSSPACE, CSELEM, and CSSPCFLR data bases for the transition plan reports. A standard report program or report writer is used to create the printed reports.

**APPENDIX B**

***CAMPUS BUILDING LIST***

## CSU BUILDING LIST - CODING

### TEMPORARY VS. PERMANENT

Only the temporary buildings were identified. All others are considered permanent.

T      TEMPORARY

### STATE vs. NON-STATE BUILDINGS

All non-state owned buildings were identified using a coding system to separate the various funding (revenue) sources:

2      PARKING  
3      HOUSING  
4      STUDENT UNION  
5      HEALTH  
6      AUXILIARY-FOUNDATION

Parking structures were included in the building lists but parking lots were not. All parking lots should be identified as "2" along with the parking structures.

The state-owned buildings are all the "other" buildings, that is, without notation. They can be coded "1" (one).

### ESSENTIAL vs. NON-ESSENTIAL BUILDINGS

"Essential" buildings are defined as those which contain "program" spaces or activities which students or staff must have access to. Mechanical buildings or storage facilities are considered "non-essential" from the viewpoint of the ADA and "program" accessibility.

E      ESSENTIAL  
N      NON-ESSENTIAL

## PLAN REVIEW

### CSU ARCHITECTURAL BARRIER REMOVAL PROGRAM

CSU Project No: 9522

|                           |   |
|---------------------------|---|
| <b>CAMPUS:</b>            | <b>SAN LUIS OBISPO</b>                        |
| <b>BUILDING:</b>          | <b>DAIRY SCIENCE II (#18.3)</b>               |
| <b>ARCHITECT:</b>         | <b>GRANT PEDERSEN PHILLIPS, SANTA BARBARA</b> |
| <b>DATE OF DRAWINGS:</b>  | <b>14-Mar-91</b>                              |
| <b>PHASE OF DRAWINGS:</b> | <b>DESIGN DEVELOPMENT</b>                     |
| <b>DATE OF REVIEW:</b>    | <b>8-Jan-93</b>                               |

The plans for the above referenced project have been reviewed for general compliance to the requirements of the Americans with Disabilities Act (ADA) and TITLE 24. The following comments should be reviewed by the Architect of record. Our comments are based on the drawings and specifications made available for our review which may be preliminary or incomplete. These comments should be viewed as suggestions to be reviewed by the Architect of record and do not diminish the Architect's legal responsibilities.

#### COMMENTS:

- Access to building is at grade on west side. Corridors and hallways are 6'-6" wide.
- There is a ramp on southwest side and northeast side.
- All rooms are accessible - all doors are 36" wide. There is adequate clearance on pull side, strike side of each door.
- There are 2 public (student) toilet rooms on the north side. Toilet room doors have adequate clearances, stalls are 5'-0" wide and 9'-0" deep.
- Toilet seats are 18" from closest wall.
- Lockers and shower rooms have each a 5'-0" clear turning space.
- No working drawings are available at time of review to check for adequate clearances and height of bathroom fixtures.

#### SUMMARY EVALUATION:

- The Dairy Science II building after plan evaluation of Design Development Phase drawings, complies with ADA and Title 24.
- No working drawings were available at time of review.

The plans for the above referenced project have been reviewed for general compliance to the requirements of the Americans with Disabilities Act (ADA) and TITLE 24. The following comments should be reviewed by the Architect of record. Our comments are based on the drawings and specifications made available for our review which may be preliminary or incomplete. These comments should be viewed as suggestions to be reviewed by the Architect of record and do not diminish the Architect's legal responsibilities.

#### COMMENTS:

- Access to Physical Education Building is through ramp on southwest side.
- Ramp is sloped at 1:12, is 4'-0" wide.
- Handrails are provided on both sides of ramp, mounted at 42" above floor level.
- Handrails have proper extensions.
- First Floor - all rooms on this floor are accessible.
- Second Floor - access is through elevator. All rooms are accessible.
- Third Floor - faculty offices on this floor are fully accessible. There is adequate clearance at pull side, strike side of all doors.
- Fourth Floor - all rooms on this floor are fully accessible.
- Stairs - a review of stair plans show a tread depth of 11" and riser height of 6.5".
- 2" wide contrasting color stripes are provided at each exterior tread.
- Stair handrails are mounted at a height of 34" A.F.F. extensions equal the tread depth + 12" are mounted at landings.
- Toilet rooms are provided on 2nd and 4th levels.
- Second floor level toilet rooms have a 5'-0" diameter turning space.
- Toilet stalls are mounted 18" clear near side wall.
- Grab bars are installed on rear and side wall.
- Side grab bar is 36" long instead of 42".
- Rear grab bar is 30" long instead of 36".

**PLAN REVIEW**

**CSU ARCHITECTURAL BARRIER REMOVAL PROGRAM**

**CSU Project No: 9522**

**BUILDING:** PHYSICAL EDUCATION BUILDING (BUILDING #42)

**COMMENTS:**

- Turning space at 2nd floor level toilet rooms is not possible because doors swing in not allowing a clear turning space.
- Fourth floor level toilet rooms have adequate clearances (5'-0" clear turning space). Stalls lack adequate side and rear grab bars. Existing grab bars are 30" (rear) and 36" (side).
- Lavatories are mounted at a height of 36" instead of 24".

**EVALUATION SUMMARY:**

- Adjust handrail height at exterior ramp handrail.
- Swing out toilet room doors to provide a 5'-0" clear turning space.
- Provide 42" side grab bars and 36" rear grab bars at all toilet rooms (2nd and 4th levels).
- Adjust lavatory height to 34" above floor level.

## PLAN REVIEW

### CSU ARCHITECTURAL BARRIER REMOVAL PROGRAM

CSU Project No: 9522

|                           |   |
|---------------------------|---|
| <b>CAMPUS:</b>            | <b>SAN LUIS OBISPO</b>                      |
| <b>BUILDING:</b>          | <b>RECREATION CENTER (BUILDING #43)</b>     |
| <b>ARCHITECT:</b>         | <b>ELS/ ELBASANI &amp; LOGAN ARCHITECTS</b> |
| <b>DATE OF DRAWINGS:</b>  | <b>DEC. 11, 1990</b>                        |
| <b>PHASE OF DRAWINGS:</b> | <b>WORKING DRAWINGS</b>                     |
| <b>DATE OF REVIEW:</b>    | <b>JAN. 8, 1993</b>                         |

The plans for the above referenced project have been reviewed for general compliance to the requirements of the Americans with Disabilities Act (ADA) and TITLE 24. The following comments should be reviewed by the Architect of record. Our comments are based on the drawings and specifications made available for our review which may be preliminary or incomplete. These comments should be viewed as suggestions to be reviewed by the Architect of record and do not diminish the Architect's legal responsibilities.

#### COMMENTS:

- Access to main, west and north entrances is through ramps.
- Access to pool is through ramp on west side. Both ramps slope at 1:12 and handrails have proper extensions.
- All entrance doors are at least 36" wide.
- Access is provided to all activities including basketball courts, locker areas, bathrooms and offices.
- Racquetball courts in basement are accessible through elevator.
- Second Floor - Multi purpose gymnasium/events center (room 301) is accessible through a ramp on northeast side).
- Weight room, exercise/dance room is accessible through ramp or elevator.
- Toilet rooms review Ground Floor - All toilet rooms have 18" clear at strike side, pull side.
- There is a 44" clear throughout bathrooms.
- Urinals have 30" X 48" minimum clearance as well as lavatories.
- Toilet stalls are 60" wide by 12 feet. Toilet seats are 18" above floor.
- Grab bars are installed on side and rear wall of each stall. Mounting height is 33".
- Lavatories have adequate knee clearances.
- Showers are provided with one accessible shower head and one seat mounted at 1'-6" AFF.
- Rim height is at 15" (urinals).
- Mirrors are mounted at 40" above floor.
- All accessories inside toilet rooms or lockers are within ranges specified by ADA & Title 24.

**PLAN REVIEW**

**CSU ARCHITECTURAL BARRIER REMOVAL PROGRAM**

**CSU Project No: 9522**

**BUILDING:** RECREATION CENTER / SAN LUIS OBISPO

**COMMENTS:**

- Mirrors are tilted from the top.
- Exterior Stairs - treads are 11". Risers are 6.5" high. Handrails are mounted at a height of 34" AFF. Extensions equal to the tread depth + 12" are provided at landings.
- 2" wide contrasting strips are provided at each tread.

**EVALUATION SUMMARY:**

The recreation center, after plan evaluation complies with ADA and Title 24 for accessibility.

| <b>PHASE OF DRAWINGS:</b> | <b>DESIGN DEVELOPMENT</b>           |
| <b>DATE OF REVIEW:</b>    | <b>1/8/93</b>                       |

The plans for the above referenced project have been reviewed for general compliance to the requirements of the Americans with Disabilities Act (ADA) and TITLE 24. The following comments should be reviewed by the Architect of record. Our comments are based on the drawings and specifications made available for our review which may be preliminary or incomplete. These comments should be viewed as suggestions to be reviewed by the Architect of record and do not diminish the Architect's legal responsibilities.

#### COMMENTS:

- Access to main building entrance is through a ramp on southeast side.
- All doors are 36" wide. Corridors/hallways are 8'-0" wide or larger.
- All interior doors have at least 18" clear on the pull side, strike side.
- Two drinking fountains are located in the "C" corridor. These drinking fountains should be mounted so that the spout height is 36" above floor level and that there is at least 27" knee clearance.
- There is a men's and a women's locker and a men's and women's bathroom.
- The stall at both men's and women's bathrooms is 5'-0" wide and 9'-0" deep.
- A clear 5'-0" turning space is provided at both toilet rooms.
- A 36" clearance is provided at the urinal.
- There is a 5'-0" turning space at both men's and women's locker rooms. The stalls in these toilet rooms are installed 18" from closest wall.
- Two showers are provided at both lockers.
- Although a bench is provided at each shower, there is not enough clearance at the shower door which scales a 24" opening.
- Although these drawings are from design development phase, there is no indication that an accessible shower is provided.

#### SUMMARY EVALUATION:

- Install all bathroom fixtures at the correct height. Install the grab bars (side & rear) at all toilet stalls.
- Provide hand held shower heads and shower seats at both showers. Make one locker in each locker room accessible (minimum 36" clear to locker).

**APPENDIX E**

***DOOR PRESSURE ANALYSIS***

## **APPENDIX E**

### ***DOOR PRESSURE ANALYSIS***

#### **A. ADA REGULATIONS:**

According to ADAAG regulations, the maximum force for pushing or pulling open a door should be as follows:

1. Fire doors should have the minimum opening force allowable by the appropriate administrative authority.
2. Other doors:
  - a. Exterior hinged doors: (reserved under ADA).
  - b. Interior hinged doors: 5 pounds of pressure.
  - c. Sliding or folding doors: 5 pounds of pressure.

ADA regulations do not list the maximum pressure required for an exterior hinged door. However, the maximum force for pulling or pushing open an exterior door under California Title 24 (Section 3304 i.2) is 8.5 pounds and 5 pounds for an interior door.

#### **B. METHODOLOGY:**

In agreement with the CSU Access Committee, the opening force was not measured at all doors. A test was conducted instead where the pressure at randomly selected doors was measured on all campuses. An average of 100 doors were surveyed per campus, with an average of 10 doors per building. A total of 2,168 doors were surveyed throughout all 20 campuses. Door pressure was measured in buildings that had high student traffic such as the administration, student health center, student union, classroom buildings and other essential campus buildings.

For exterior doors, door pressure was listed from 0 to 8.5 lbs and in increments of 1.5 lbs: from 8.5 to 10 lbs and over 10 lbs. For interior doors, door pressure was listed from 0 to 5 lbs and then in increments of 1.5 lbs: 5 to 6.5 lbs and over 6.5 lbs. The reason for this increment is to be able to modify or adjust the door pressure if it is over the limit by only 1.5 pounds or to install new closers if the door pressure is over the maximum of 10 lbs for exterior doors or 6.5 lbs for interior doors, if adjustment is not possible.

### **C. FINDINGS ON SYSTEM WIDE BASIS:**

Out of 2,168 doors surveyed, 1,014 were exterior doors and 1,154 were interior doors.

1. Exterior Doors: 52.45% of all exterior doors surveyed were over the door pressure limit of 8.5 lbs allowed by California Title 24. 47.53 % of all exterior doors surveyed were within the limit allowed by California Title 24; 21.59% were between 8.5 and 10 lbs and 30.86% were over 10 lbs.

2. Interior Doors: 66.37% of all interior doors surveyed were over the door pressure limit of 5 lbs allowed by ADA. 33.62% of all interior doors surveyed were within the limit allowed by ADA; 15.42% were between 5 and 6.5 lbs and 50.95% were over 6.5 lbs.

### **D. FINDINGS ON THE SAN LUIS OBISPO CAMPUS:**

41.46% of all exterior doors surveyed were over the door pressure limit allowed by California Title 24.

65.21% of all interior doors surveyed were over the door pressure limit allowed by ADA.

### **E. CONCLUSION AND RECOMMENDATIONS:**

This door pressure analysis supports the concerns voiced by the disabled students, staff and faculty raised at the public forum, that the heavy door pressure is a major issue. Door pressure should be adjusted or new door closers should be installed. It is recommended that doors pressure be adjusted as an on-going maintenance expense on a six month cycle. The ADA requires that a public entity shall maintain in proper operating condition equipment that is necessary to provide access.

## CAMPUS REPORT FOR DOOR PRESSURE

**APPENDIX F**

***PHOTOS***

1

2

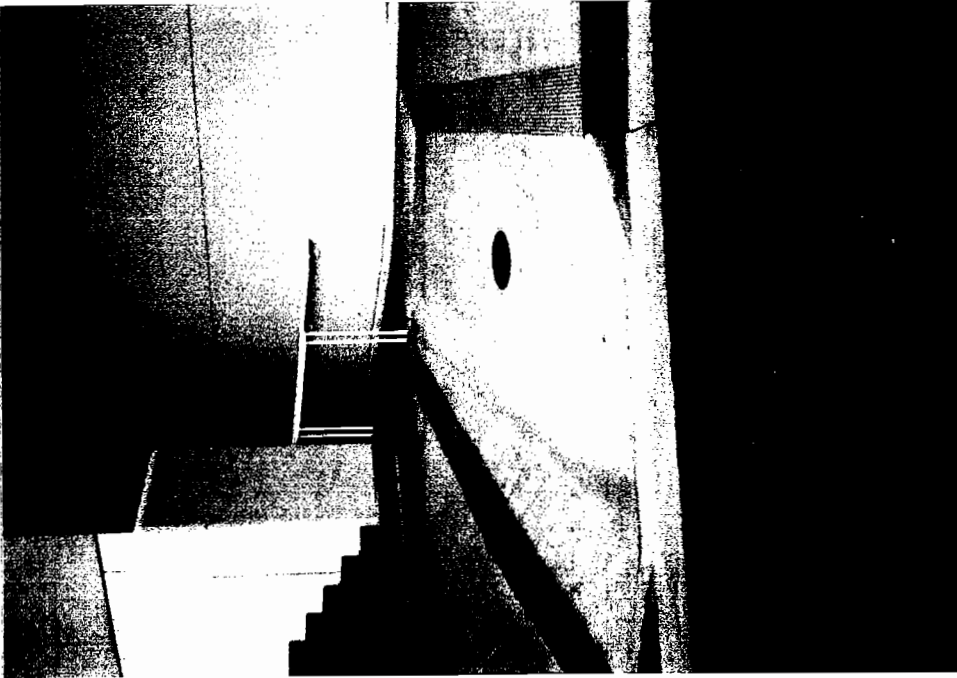

3

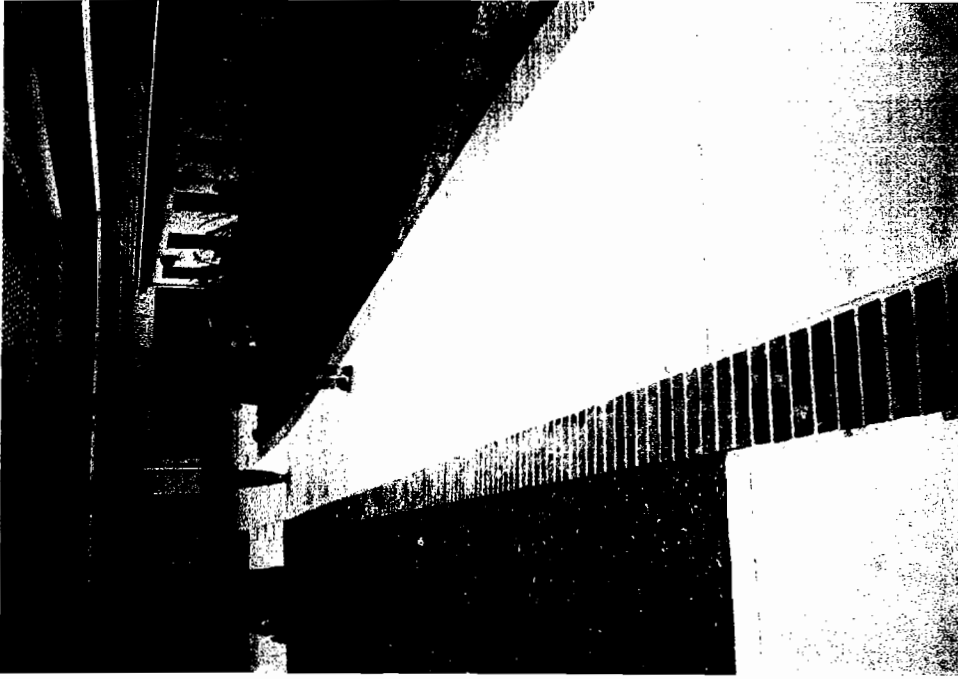

1. The bike racks block the accessible path of travel on the west side of the Math-Home Economics building (Bldg 38)
2. The stairs on the west side of the Dexter building (Bldg 34) lack color contrasting stripes on the stair treads and lack handrails.
3. The bike racks block the path of travel on the west side of the Science building (Bldg 52).

4

5

- 4. The curb cut on the south side of the new Business building has a steep running slope (10°) and steep flared sides (20°).
- 5. The new walkway on the east side of the Student Services building (Bldg 124) is steep (5.1°) and is technically a ramp and requires handrails and level rest areas.

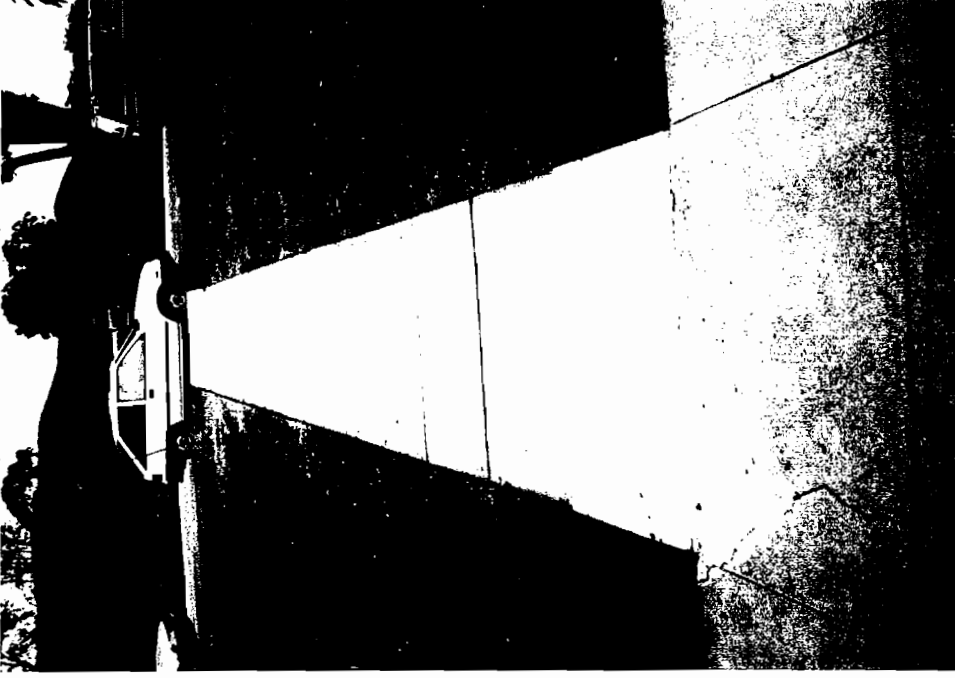

6

6. The walkway of the west side of Chase Hall is steep (5.4°) and is technically a ramp, requiring handrails. This building is inaccessible.

7. The walkway on the east side of Heron Hall (Bldg 117) is steep (8.5°) and lacks handrails.

7

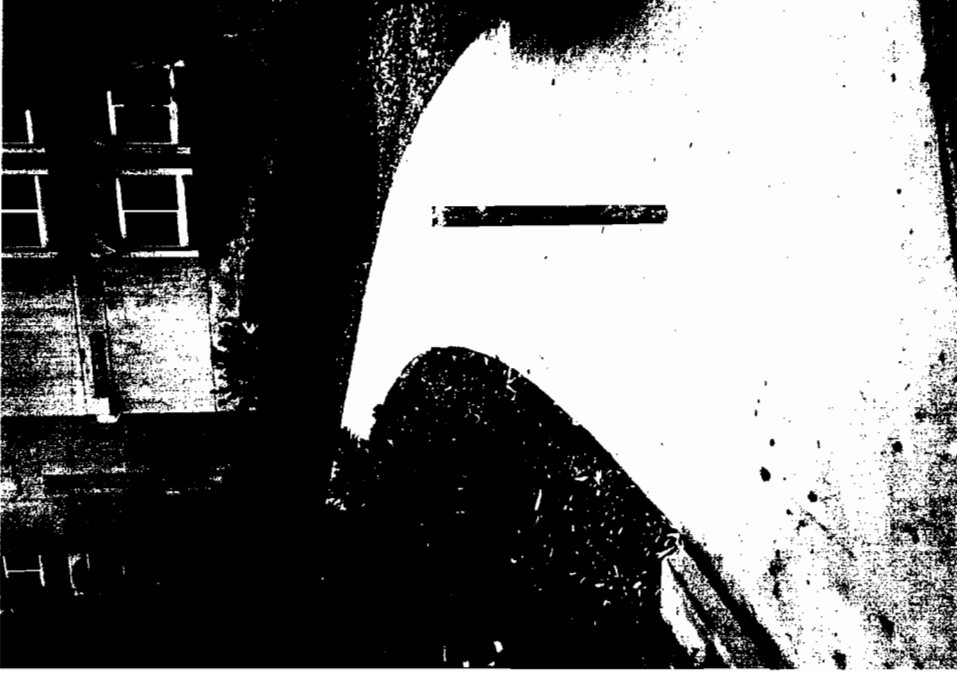

8

9

10

- 8. The ramps to Cottages 1, 2 and 3 (Bldgs 85, 86 and 87) are too steep (5°) and lack handrails.
- 9. The main ramp to the Student Health Center is excessively long and lacks handrails.
- 10. The ramp/walkway to the west side of Yosemite Hall is too steep (10°) and lacks handrails. This is typical situation at all dorms.

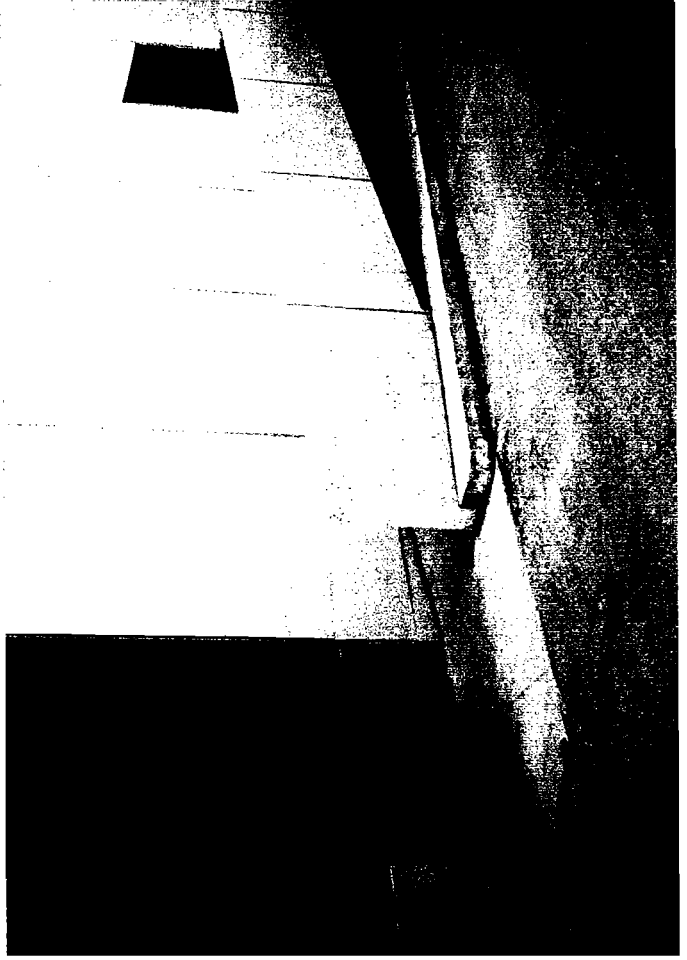

11

■ 11. The ramp/walkway on the west side of Tenaya Hall is 200 feet long and lacks handrails and level rest areas.

12

■ 12. The ramp on the side of the Engineering West building lacks handrails on both sides.

CSU No. 9522

The California State University  
Architectural Barrier Removal Project

File No: 92115-A

Subject: Addendum Report to Transition Plan  
Parking lot results based on compliance with ADA

This report is based on data collected at each parking lot and structure on the campus and is contained in the database. A description of each field is as follows:

- ◆ **Lot/Structure**  
Name or description of the parking area surveyed.
- ◆ **Total Spaces**  
Total number of spaces at each lot or structure.
- ◆ **Total Req - Car/Van**  
Total number of required accessible stalls for both cars (upper number) and vans (lower number) based on ADA requirements.
- ◆ **Compliant - Car/Van**  
An indicator as to whether the current stalls meet compliance based on the width ( $\Rightarrow$ 8') of the stall and the aisle space (5' for cars/8' for vans) next to the stall. Measurements are based on parking stripes at the site. 'N' indicates non-compliance. 'Y' indicates compliance.
- ◆ **Restripe - Car/Van**  
The number of car and/or van spaces which need restriping to meet compliance for that lot or structure. The estimated costs of restriping the lot (\$100 per stall) are also listed.
- ◆ **Additional Signage**  
The number of car and/or van signs which must be added to the lot or structure. Signage already located at the lot (even if not identifying a compliant space) is counted towards the total number of additional signs required.
- ◆ **Warning Sign at Entrance**  
A sign indicating the availability of accessible parking is required at each lot or structure. If the sign was not located, the cost for the addition of a sign is indicated in the report.
- ◆ **Vertical Clearance for Vans**  
This report line only appears for structures with vertical clearance less than 8'2". An additional line item is added for those structures where low clearance indicates the need for a covered exterior parking area for accessible vans.
